*You should read the following discussion and analysis of our financial condition and results of operations together with our consolidated financial statements as of and for each of the years ended December 31, 2009 2010 and 2011 and as of and for the nine months ended September 30, 2012 and the accompanying notes included elsewhere in the offering memorandum.*

We believe the most significant factors that directly or indirectly affect our financial performance and results of operations include:

- § general economic conditions in China;
- § product mix and our ability to offer new products;
- § our ability to manage and expand our scale of operation globally;
- § our ability to control our production costs; and
- § our ability to effectively manage our finance lease services.

***General Economic Conditions in China***

We derived substantially all of our consolidated turnover from the sales of our products in China during 2009, 2010, 2011 and the nine months ended September 30, 2012. Demand for construction machinery is affected by the general economic conditions in China. Historically, our business expansion and the growth of the construction machinery industry have been driven by the rapid economic growth in China and the associated urbanization and increase in fixed asset investments. In recent years, China has been one of the fastest growing economies in the world. Between 2001 and 2011, China's GDP increased from approximately RMB11.0 trillion to approximately RMB47.2 trillion, representing a CAGR of 15.7%. As a result of the strong economic growth, China has experienced an ongoing urbanization and industrialization process and a significant increase in the general public's spending power in China. The urbanization level in China increased from 35.8% in 2000 to 50.6% in 2011, according to the statistics published by the United Nations. The urbanization level in China is estimated to be 54.2% and 58.9% in 2015 and 2020, respectively, according to Euromonitor International Ltd, a London-based intelligence firm. The urbanization of and the increasing spending power in China have led to increasing demand for infrastructure, industrial, commercial and residential developments. Fixed asset investment in urban areas in China increased from approximately RMB3.0 trillion in 2001 to approximately RMB30.2 trillion in 2011, according to the National Bureau of Statistics, representing a CAGR of 26.0%. Meanwhile, our growth has benefited from China's favorable government policies toward fixed asset investments and the infrastructure sector, including favorable government infrastructure investment policies to expand, modernize and upgrade

### ***Product Mix and Our Ability to Offer New Products***

Our turnover is primarily affected by the sales volume and, to a lesser extent, by fluctuations in the selling prices of our products. The profitability of our products varies across our product lines. Changes in product mix have in the past affected, and are expected to continue to affect, our turnover and gross margin. From time to time, we adjust our product mix across product lines and within specific product lines to capitalize on the prevailing market demand and maximize our overall turnover. Meanwhile, our capability to offer new products and improve existing products has been and is expected to be an important driver to increase our turnover and profitability.

We derived the majority of our turnover from sales of concrete machinery and crane machinery, which in aggregate accounted for 74.5%, 78.2%, 79.5%, 79.0% and 80.6% of our consolidated turnover for each year of 2009, 2010, 2011 and the nine months ended September 30, 2011 and 2012, respectively. We expect sales of our concrete machinery and crane machinery to continue to increase in absolute terms and continue to be a major source of our turnover. However, we expect the turnover generated from the sales of concrete machinery and crane machinery to decrease as a percentage of our consolidated turnover in the future with the expansion of our other product lines. Furthermore, in view of China's ongoing urbanization and significant investment in infrastructure projects, we believe there is strong growth potential in the earth working machinery market. As a result, we aim to focus on the growth of this product line to capitalize on prevailing industry trends, we expect sales of our earth working machinery to increase in absolute terms and as a percentage of our consolidated turnover.

We believe that our comprehensive product offerings, including innovative products and the flexibility in adjusting our product mix, allows us to respond to different market conditions in a timely manner and maintain relatively stable and high turnover and profitability.

### ***Our Ability to Manage and Expand our Scale of Operations Globally***

In order to capture the market opportunity, we are currently expanding, and will continue to expand, our scale of operations in China and globally by establishing new manufacturing and research and development facilities, expanding our distribution and service network and selectively conducting strategic acquisitions and alliances. By doing so, we may broaden our customer base, expand our product offerings, enhance our research and development capabilities and increase our manufacturing capacity and capabilities. In particular, we intend to expand our global footprint and the overseas sales of our products so as to capitalize on the growing international demand for competitively priced construction machinery manufactured in China. By expanding our distribution and service network overseas, we may strengthen our ability to provide value-added services to our customers in the overseas market and increase our sales in the overseas market. All of the measures mentioned above may increase our turnover or our profitability. An increase in our sales from the overseas market will also diversify the geographic concentration of our sources of turnover, which may help reduce our reliance on the demand for our products within China and limit our exposure to any adverse changes in China's economic conditions and the PRC government's policies which might affect the sales of our construction machinery.

However, expanding our scale of operations globally, including strategic acquisitions and alliances, is associated with high investment costs. If we are unable to balance the costs of establishing additional manufacturing and research and development facilities with the growth in demand for our products or if such investment costs are higher than we expect, we may be unable to generate an adequate return for such investments and may experience an increase in financial obligations and unit manufacturing costs that may negatively affect our results of operations. In order to sell our products in certain jurisdictions, we may need to refine or enhance certain products to meet the applicable regulatory requirements for that jurisdiction, which would increase our aggregate manufacturing costs. Furthermore, the parts depots and after-sales services centers, as well as the additional overseas branch offices and representative offices we plan to establish as part of our distribution and service network expansion plan will also result in an increase in our operating expenses.

### ***Our Ability to Control Our Production Costs***

In 2009, 2010, 2011 and the nine months ended September 30, 2011 and 2012, costs of raw materials, parts and components amounted to RMB14,281 million, RMB20,740 million, RMB29,463 million (US\$4,688 million), RMB21,127 million and RMB24,286 million (US\$3,864 million), respectively, representing 68.8%, 64.5%, 63.7%, 63.6% and 62.1% of our consolidated turnover for the respective periods. The key raw materials, parts and components for our production include steel, branded chassis and hydraulic pumps, valves and cylinders. The production costs of our products are subject to fluctuations in the prices of steel and steel components. In recent years, market demand for steel has been strong. There are a limited number of steel suppliers and it may be difficult for us to find alternative suppliers for steel when demand exceeds supply. Due to strong market demand, supply of certain imported parts and components, including branded chassis and hydraulic pumps, valves and cylinders, may be limited. As a result, we typically keep higher levels of inventories of certain imported parts and components for which the supply may be limited. As we expand our scale of operation and as we gain better access to foreign-based suppliers through the integration of CIFA, we are able to enter into strategic framework agreements with certain suppliers to ensure a sufficient supply of high-quality raw materials, parts and components at relatively lower prices on a sustainable basis. While we have not experienced significant increases in our cost of labor in the past, the competitive environment in which we operate and the continued economic growth in China will continue to increase demand for skilled labor, which we believe may increase our cost of labor in the future. Starting in 2010, we have increased the use of third-party contractors to manufacture and assemble certain of our products. We believe the increase in use of third-party contractors further helps to control our production costs, as we are able to avoid the capital investment and depreciation and amortization associated with the expansion of our in-house production capacity.

We have taken initiatives in recent years to improve our manufacturing efficiency, such as improving our manufacturing technology and equipment and reorganizing our manufacturing activities among different facilities to improve efficiency and manufacturing cycle times and increase the flexibility of our manufacturing processes. However, if we are unable to continue to improve our manufacturing efficiency, thereby controlling our manufacturing costs, we may not be able to maintain or continue to

*Our Ability to Effectively Manage Our Finance Lease Services*

We started providing finance lease services as a payment option to our customers in 2007. The finance lease contracts are generally for two to four years. For certain products that have longer useful lives,

T T T T T T T

**Turnover**

We generate turnover primarily from the following operating segments:

- § Concrete machinery;
- § Crane machinery;
- § Environmental and sanitation machinery;
- § Road construction and pile foundation machinery;
- § Earth working machinery;
- § Material handling machinery and systems; and
- § Finance lease services.

The following table sets forth the breakdown of our consolidated turnover by our operating segments, and each expressed as a percentage of our consolidated turnover, for the periods indicated:

	2009		2010		31, 2011			2011		30, 2012		
		%		%		\$	%		%		\$	%
Concrete machinery . . . . .	7,157	34.5	14,085	43.8	21,212	3,375	45.8	15,009	45.2	21,185	3,371	54.2
Crane machinery . . . . .	8,298	40.0	11,077	34.4	15,618	2,485	33.7	11,205	33.8	10,341	1,645	26.4
Environmental and sanitation machinery . . .	1,230	5.9	1,874	5.8	2,978	474	6.4	2,033	6.1	2,040	324	5.2
Road construction and pile foundation machinery . . .	787	3.8	1,246	3.9	1,737	276	3.7	1,304	3.9	1,087	173	2.8
Earth working machinery . . . . .	445	2.1	772	2.4	1,048	167	2.3	912	2.7	1,748	278	4.5
Material handling machinery and systems . . . . .	873	4.2	422	1.3	504	80	1.1	403	1.2	269	43	0.7
Finance lease services . . . . .	397	1.9	1,043	3.2	1,583	252	3.5	1,116	3.4	1,219	194	3.1

Sales of our environmental and sanitation machinery and our earth working machinery have also increased significantly in 2009, 2010 and 2011 as a result of strong market demand driven by China's ongoing urbanization and significant investment in infrastructure projects. Such increase was also due to our strategy to devote more sales and marketing and other resources in these two segments in order

*the overseas sales are higher and lower, respectively, for the relevant periods than the amounts and percentages presented in the table above. We believe the geographic classification basis used in the above presentation provides investors with additional information about the turnover from our domestic and overseas end-users.*

From 2009 to 2010, sales of our products to overseas end-users decreased by 29.5% in absolute terms and from 12.6% to 5.7% as a percentage of our consolidated turnover. The decrease was primarily due to (i) the decrease in the purchasing power of customers in the overseas markets where our performance has traditionally been strong, such as the Persian Gulf countries, Russia and India, and (ii) a stronger economic recovery and corresponding stronger demand for our products in China, and our strategy to prioritize sales to domestic customers. From 2010 to 2011, sales of our products to overseas end-users increased by 39.3% in absolute terms and remained stable at 5.5% as a percentage of our consolidated turnover. Turnover from the sales of our products to overseas end-users increased by 42.1% in absolute terms for the nine months ended September 30, 2012 compared to the same period in 2011 and increased from 5.6% to 6.7% as a percentage of our consolidated turnover during such period. The growth in our overseas sales both in terms of absolute terms and as a percentage of our consolidated turnover is primarily attributable to growth in the South and Central American, Asia Pacific and African markets.

Our products have been sold to a diversified customer base and for each of the years ended December 31, 2009, 2010, 2011 and the nine months ended September 30, 2012, we did not have a single customer, including sales to our dealers, which accounted for more than 10.0% of our consolidated turnover on an individual basis.

### ***Cost of Sales and Services***

Our cost of sales and services primarily consists of:

- § raw materials, i.e., costs of raw materials, parts and components, including steel, branded chassis, hydraulic parts and components, engines, tires and electric controls, and a variety of other raw materials and fabricated or manufactured components;
- § staff costs, including salaries and benefits for personnel directly involved in manufacturing activities;
- § depreciation and amortization of property, plant and equipment used for manufacturing purposes;
- § costs of finance lease services, including fees, other surcharges and interest related to factoring of receivables under finance lease; and
- § others, including manufacturing overhead, such as maintenance of production equipment and utility costs, including electricity, steam and water and costs associated with waste treatment.

The following table sets forth the major components of our cost of sales and services both in absolute terms and as a percentage of our consolidated turnover for the periods indicated:

	2009		2010		31, 2011			2011		30, 2012		
		%		%		\$	%		%		\$	%
Raw materials .....	14,281	68.8	20,740	64.5	29,463	4,688	63.7	21,127	63.6	24,286	3,864	62.1
Staff costs .....	533	2.6	842	2.6	1,047	167	2.3	777	2.3	902	144	2.3
Depreciation and amortization .....	150	0.7	239	0.7	253	40	0.5	199	0.6	202	32	0.5
Costs of finance lease services .....	165	0.8	354	1.1	207	33	0.4	181	0.6	34	5	0.1
Others .....	293	1.4	249	0.8	346	55	0.7	248	0.8	220	35	0.6
Total cost of sales and services .....	<u>15,422</u>	<u>74.3</u>	<u>22,424</u>	<u>69.7</u>	<u>31,316</u>	<u>4,933</u>	<u>67.6</u>	<u>22,532</u>	<u>67.9</u>	<u>25,644</u>	<u>4,000</u>	<u>65.6</u>

Costs of raw materials, parts and components account for the majority of our cost of sales and services. 64.8hs.

percentage of our consolidated turnover further decreased to 65.6% for the nine months ended September 30, 2012 from 67.9% for the same period in 2011. The fluctuation of cost of sales and services as a percentage of turnover from the sales of our concrete machinery and crane machinery was primarily driven by the change of product mix and fluctuations in selling prices. For example, in 2009, sales of compact truck cranes, which have lower selling prices and lower profit margins, increased in absolute terms and as a percentage of our total sales of crane machinery, due to the global economic downturn that led to a decrease in the number of large-scale construction projects. The increase in sales volume of concrete machinery that is technologically advanced and enjoys higher profit margins led to decreases in cost of sales and services as a percentage of turnover from the sales of our concrete machinery in 2009, 2010 and 2011. In 2011, cost of sales and services as a percentage of our consolidated turnover from the sales of our concrete machinery decreased from 68.0% to 64.4%, mainly because the sales of our advanced truck-mounted concrete pumps with longer concrete placing

Our overall gross margin increased from 25.7% in 2009 to 30.3% in 2010 and further increased to 32.4% in 2011. In the nine months ended September 30, 2012, our overall gross margin increased to 34.4% from 32.1% for the same period in 2011. The fluctuation of gross margin for each segment is directly related to the changes in cost of sales and services as a percentage of consolidated turnover for the respective segment as discussed above.

#### ***Other Revenues and Net Income/(Loss)***

Other revenues and net income/(loss) include government grants and other income and expenses. Government grants mainly include value-added tax refunds for enterprises located in certain locations and other grants we receive from the PRC government, which resemble government operating subsidies. In 2009, 2010, 2011 and the nine months ended September 30, 2011 and 2012, we recognized government grants in the amount of RMB74 million, RMB70 million, RMB87 million (US\$14 million), RMB72 million and RMB52 million (US\$8 million) respectively. This has not been and is not expected to be a steady or significant revenue source for us.

#### ***Operating Expenses***

Our operating expenses include sales and marketing expenses, general and administrative expenses and research and development expenses.

#### ***Sales and Marketing Expenses***

Sales and marketing expenses consist primarily of salaries and benefits for our sales and marketing personnel, commissions paid to third-party dealers, advertising expenses, sales-related travel expenses, transportation expenses and other sales and marketing expenses.

from other financial institutions less interest expenses capitalized during construction in progress. Our net finance costs are primarily affected by the outstanding amount of borrowings and applicable interest rates. The interest expense related to factoring of receivables under finance lease is not included in net finance costs but in the costs of finance lease services because it is considered to be a direct cost of our finance lease services.

T T T T

The discussion and analysis of our financial position and results of operations are based on our consolidated financial statements prepared in accordance with IFRS. Our financial position and results of operations are sensitive to accounting methods, assumptions and estimates that underlie the preparation of the consolidated financial statements. The estimates and assumptions are based on historical experience and on other factors that are believed to be reasonable under the circumstances, the results of which form the basis of making the judgments about matters that are not readily apparent from other sources. The estimates are reviewed on an ongoing basis. Actual results may differ from those estimates as facts, circumstances and conditions change. We believe the following critical accounting policies involve the most significant judgments and estimates used in the preparation of our consolidated financial statements.

#### ***Impairment of trade receivables***

We review trade receivables that are stated at cost or amortized cost at each balance sheet date to determine whether there is objective evidence of impairment. Objective evidence of impairment includes observable data that comes to our attention about one or more of the following loss events:

- § significant financial difficulty of the debtor;
- § a breach of contract, such as a default or delinquency in interest or principal payments;
- § it becoming probable that the debtor will enter bankruptcy or other financial reorganization;
- § significant changes in the technological, market, economic or legal environment that have an adverse effect on the debtor; and
- § a significant or prolonged decline in the fair value of an investment in equity instrument below its cost.

If objective evidence of impairment exists, the impairment loss is measured as the difference between the asset's carrying amount and the present value of estimated future cash flows, discounted at the financial asset's original effective interest rate (i.e. the effective interest rate computed at initial recognition of these assets), where the effect of discounting is material. We first assess whether objective evidence of impairment exists for financial assets that are individually significant. The assessment is then made collectively for financial assets carried at amortized cost which are not individually significant but share similar credit risk characteristics, and have not been individually

assessed as impaired. We assess future cash flows of financial assets for impairment collectively based on the ageing of the accounts receivable balance, customer credit-worthiness, and historical write-off experience. If the financial condition of the customers were to deteriorate, actual historical experience would be a significant component of the estimate of the amount of the allowance for doubtful accounts. We assess the collectability of the accounts receivable balance based on the historical experience of the company and the current economic conditions. The allowance for doubtful accounts is based on the historical experience of the company and the current economic conditions. The allowance for doubtful accounts is based on the historical experience of the company and the current economic conditions.

The recoverable amount of an asset is the greater of its fair value less costs to sell and value in use. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. Where an asset does not generate cash inflows largely independent of those from other assets, the recoverable amount is determined for the smallest group of assets that generates cash inflows independently (i.e., a cash-generating unit).

An impairment loss is recognized in profit or loss if the carrying amount of an asset, or the cash-generating unit to which it belongs, exceeds its recoverable amount. Impairment losses recognized in respect of cash-generating units are allocated first to reduce the carrying amount of any goodwill allocated to the cash-generating unit (or group of units) and then to reduce the carrying amount of the other assets in the unit (or group of units) on a pro rata basis, except that the carrying value of an asset will not be reduced below its individual fair value less costs to sell, or value in use, if determinable.

It is difficult to precisely estimate the selling prices of our long-lived assets because quoted market prices for such assets may not be readily available. In determining the value in use, expected future cash flows generated by the asset are discounted to their present value, which requires significant judgment relating to level of revenue, amount of operating costs and applicable discount rate. We use all readily available information in determining an amount that is a reasonable approximation of the recoverable amount, including estimates based on reasonable and supportable assumptions and projections of revenue and amount of operating costs.

Changes in these estimates could have a significant impact on the carrying values of our assets and could result in additional impairment charges or reversals of impairment in future periods.

### ***Depreciation and amortization***

Property, plant and equipment are depreciated on a straight-line basis over the estimated useful lives of the assets, after taking into account their estimated residual value, if any. We review the estimated useful lives and residual values of the assets annually in order to determine the amount of depreciation expense to be recorded during any reporting period. The useful lives and residual values are based on our historical experience with similar assets and take into account anticipated technological changes. The depreciation expense for future periods is adjusted if there are significant changes from previous estimates.

Amortization of intangible assets with finite useful lives is recognized on a straight-line basis over the respective intangible assets' estimated useful lives. We review the estimated useful lives annually in order to estimate the amount of amortization expense to be recorded during any reporting period. The estimated useful lives are based on the estimated periods over which future economic benefits will be received by us and take into account the level of expected future competition, the risk of technological or functional obsolescence of its services, and expected changes in the regulatory and social environment. The amortization expense for future periods is adjusted if there are significant changes from previous estimates.

Intangible assets are not amortized while their useful lives are assessed to be indefinite. Any conclusion that the useful life of an intangible asset is indefinite is reviewed annually to determine whether events and circumstances continue to support the indefinite useful life assessment for that asset. If they do not, the change in useful life assessment from indefinite to finite is accounted for prospectively from the date of change and in accordance with the policy for amortization of intangible assets with finite lives as set out above.

**T**

In 2009, 2010, 2011 and the nine months ended September 30, 2012, we were primarily subject to taxation in the PRC, Hong Kong and Italy.

#### ***Taxation in the PRC***

Under the EIT Law and its implementation rules that became effective on January 1, 2008, enterprises are typically subject to a uniform tax rate of 25%.

According to the EIT Law and its implementation rules, several of our subsidiaries qualified as high-tech enterprises under the EIT Law and its implementation rules are entitled to a preferential income tax rate of 15%. In 2011, we and certain of our subsidiaries obtained the renewal approval to be qualified as a high-tech enterprise and were consequently subject to a preferential income tax rate of 15% for 2011, 2012 and 2013. Furthermore, under the EIT Law and its implementation rules, a 50% additional tax deduction is allowed for qualified research and development expenses.

In 2009, one of our subsidiaries was recognized as a high-tech enterprise for 2009, 2010 and 2011, and its income tax rate was reduced from 25% in 2008 to 15% for 2009, 2010 and 2011 as a result. Currently, we are in the process of applying for renewal of the qualification.

#### ***Taxation in Hong Kong and Italy***

Our subsidiaries in Hong Kong are subject to Hong Kong profits tax at a rate of 16.5% for 2009, 2010, 2011 and the nine months ended September 30, 2012. No provision for the Hong Kong profits tax was

**T T**

The following table sets forth a summary, for the periods indicated, of our consolidated results of operations. Each item has also been expressed as a percentage of our consolidated turnover. Our historical results presented below are not necessarily indicative of future results.

**Nine months ended September 30, 2012 compared to nine months ended September 30, 2011**

**Turnover.** Our turnover increased by 17.8% from RMB33,207 million for the nine months ended September 30, 2011 to RMB39,108 million (US\$6,222 million) for the nine months ended

September 30, 2012. The increase was primarily driven by strong market demand for construction machinery and sales of our new products. In particular, turnover from sales of our concrete machinery increased by 41.1% from RMB15,009 million for the nine months ended September 30, 2011 to RMB21,185 million (US\$3,371 million) for the nine months ended September 30, 2012. This was mainly due to a significant increase in the sales volume of our advanced truck-mounted concrete pumps with long carbon fiber concrete placing booms for the nine months ended September 30, 2012. Turnover from sales of our crane machinery decreased by 7.7% from RMB11,205 million for the nine months ended September 30, 2011 to RMB10,341 million (US\$1,645 million) for the nine months ended September 30, 2012. The decrease was primarily attributable to weaker market demand for truck cranes, which was due to a slower economic growth in China during such period. The decrease in sales of truck cranes was partially offset by an increase in sales of tower cranes, which was primarily attributable to the increase in our penetration into additional markets, particularly the second- and third-tier cities.

*Cost of sales and services.* Our cost of sales and services increased by 13.8% from RMB22,532 million for the nine months ended September 30, 2011 to RMB25,644 million (US\$4,080 million) for the nine months ended September 30, 2012 due to the increase in our sales, resulting from our continued growth and expansion.

*Gross profit.* As a result of the foregoing, our gross profit increased by 26.1% from RMB10,675 million for the nine months ended September 30, 2011 to RMB13,464 million (US\$2,142 million) for the nine months ended September 30, 2012, and our gross margin increased from 32.1% for the nine months ended September 30, 2011 to 34.4% for the nine months ended September 30, 2012, as we continued to optimize our product mix. In particular, the gross margin for our concrete machinery segment, which represented 54.2% of our consolidated turnover for the nine months ended September 30, 2012, increased to 37.1% for the nine months ended September 30, 2012 from 35.8% for the same period in 2011, primarily due to the increase in sales of our truck-mounted concrete pumps with long carbon fiber concrete placing booms which carry higher selling prices and higher profit margins. Gross margin of our crane machinery segment, which represented 26.4% of our consolidated turnover for the nine months ended September 30, 2012, increased to 27.4% for the nine months ended September 30, 2012 from 25.5% for the same period in 2011, primarily due to the decrease in the prices of our raw materials.

*Other revenues and net (loss)/income.* We recorded other revenues and net loss of RMB122 million for the nine months ended September 30, 2012, while we recorded other revenues and net income of RMB73 million for the nine months ended September 30, 2011. This was primarily due to the expenses we incurred in connection with the sale of certain of our trade receivables in the nine months ended September 30, 2012.

*Sales and marketing expenses*

*General and administrative expenses.* Our general and administrative expenses increased by 11.9% from RMB1,485 million for the nine months ended September 30, 2011 to RMB1,662 million (US\$264 million) for the nine months ended September 30, 2012, as we continued to expand our business, which in turn resulted in increases in salaries and benefits to staff and associated office expenses. General and administrative expenses as a percentage of our consolidated turnover decreased from 4.5% for the nine months ended September 30, 2011 to 4.2% in the nine months ended September 30, 2012.

*Research and development expenses.* Our research and development expenses increased by 117.4% from RMB241 million for the nine months ended September 30, 2011 to RMB524 million (US\$83 million) for the nine months ended September 30, 2012. This increase was primarily due to our continued efforts in strengthening our research and development capability, which resulted in an increase in salaries and related expenses for our research and development personnel and an increase in design and testing expenses of our products.

*Profit from operations.* As a result of the foregoing, income from operations increased by 22.4% from RMB7,067 million for the nine months ended September 30, 2011 to RMB8,652 million (US\$1,377 million) for the nine months ended September 30, 2012. The operating margin increased from 21.3% for the nine months ended September 30, 2011 to 22.1% for the nine months ended September 30, 2012.

*Net finance costs.* Our net finance costs increased significantly from RMB16 million for the nine months ended September 30, 2011 to RMB356 million (US\$57 million) for the nine months ended September 30, 2012, primarily due to an increase in our interests on our loans and borrowings, which was the result of an increase in our average balance of loans and borrowings in the period and a decrease in our net exchange gain.

*Income tax expenses.* Our income tax expenses increased by 7.9% from RMB1,089 million for the nine months ended September 30, 2011 to RMB1,175 million (US\$187 million) for the nine months ended September 30, 2012, primarily as a result of the increase in our taxable income. Our effective income tax rate decreased from 15.4% for the nine months ended September 30, 2011 to 14.2% for the nine months ended September 30, 2012.

*Profit for the period.* As a result of the above factors, our profit for the period increased by 18.9% from RMB5,992 million for the nine months ended September 30, 2011 to RMB7,127 million (US\$1,134 million) for the nine months ended September 30, 2012. Our net margin increased from 18.0% in the nine months ended September 30, 2011 to 18.2% in the nine months ended September 30, 2012.

#### ***Year ended December 31, 2011 compared to year ended December 31, 2010***

*Turnover.* Our turnover increased by 43.9% from RMB32,193 million for the year ended December 31, 2010 to RMB46,323 million (US\$7,371 million) for the year ended December 31, 2011. The increase

(US\$3,375 million) in 2011. This was mainly due to a significant increase in the sales volume of our advanced truck-mounted concrete pumps with longer concrete placing booms in 2011. Turnover from sales of crane machinery increased by 41.0% from RMB11,077 million in 2010 to RMB15,618 million (US\$2,485 million) in 2011. In particular, sales of crawler cranes and small-capacity tower cranes increased significantly as the number of infrastructure projects increased.

*Cost of sales and services.* Our cost of sales and services increased by 39.7% from RMB22,424 million for the year ended December 31, 2010 to RMB31,316 million (US\$4,983 million) for the year ended December 31, 2011 as a result of our continued growth and expansion, which was in line with the increase in our sales and production volume.

*Gross profit.* As a result of the foregoing, our gross profit increased by 53.6% from RMB9,769 million for the year ended December 31, 2010 to RMB15,007 million (US\$2,388 million) for the year ended December 31, 2011, and our gross margin increased from 30.3% for the year ended December 31, 2010 to 32.4% for the year ended December 31, 2011 as a result of the change in our product mix and improvement in our manufacturing efficiency. In particular, the gross margin for concrete machinery, which represented 45.8% of our consolidated turnover in 2011, increased to 35.6% from 32.0% in 2010, primarily due to the sales of our advanced truck-mounted concrete pumps with longer concrete placing booms, which carry higher selling prices and higher profit margins, increased as a percentage of our total sales of concrete machinery.

*Other revenues and net income.* Our other revenues and net income decreased significantly from RMB54 million for the year ended December 31, 2010 to RMB14 million (US\$2 million) for the year ended December 31, 2011.

*Sales and marketing expenses.* Our sales and marketing expenses increased by 47.3% from RMB2,146 million for the year ended December 31, 2010 to RMB3,160 million (US\$503 million) for the year ended December 31, 2011. This increase was primarily due to the fact that we expanded our distribution network and strengthened our sales and marketing efforts, which resulted in increases in salaries and benefits to our sales and marketing personnel and expenses related to advertisement and promotion. Sales and marketing expenses as a percentage of our consolidated turnover increased from 6.7% for the year ended December 31, 2010 to 6.8% for the year ended December 31, 2011.

*General and administrative expenses* Our general and administrative expenses increased by 13.1% from RMB1,645 million for the year ended December 31, 2010 to RMB1,861 million (US\$296 million) for the year ended December 31, 2011, as we continued to expand our business, which in turn resulted in increases in salaries and benefits to staff and associated office expenses. General and administrative expenses as a percentage of our consolidated turnover decreased from 5.1% for the year ended December 31, 2010 to 4.0% for the year ended December 31, 2011.

*Research and development expenses.* Our research and development expenses increased by 50.2% from RMB265 million for the year ended December 31, 2010 to RMB398 million (US\$63 million) for the year ended December 31, 2011. This increase was primarily due to our continued efforts in strengthening our research and development capability, which resulted in an increase in salaries and related expenses for our research and development personnel and an increase in design and testing expenses of our products.

*Profit from operations.* As a result of the foregoing, profit from operations increased by 66.5% from RMB5,767 million for the year ended December 31, 2010 to RMB9,602 million (US\$1,528 million) for the year ended December 31, 2011. Our operating margin increased from 17.9% for the year ended December 31, 2010 to 20.7% for the year ended December 31, 2011.

*Net finance costs.* Net finance costs decreased significantly from RMB365 million for the year ended December 31, 2010 to RMB36 million (US\$6 million) for the year ended December 31, 2011 primarily due to an increase in interest income from the unutilized portion of the proceeds from our non-public offering of A Shares and the global offering of our H Shares and exchange gains resulting from the appreciation of the Renminbi, partially offset by an increase in interests on our loans and borrowings.

*Income tax expenses.* Our income tax expenses increased by 72.6% from RMB828 million for the year ended December 31, 2010 to RMB1,429 million (US\$227 million) for the year ended December 31, 2011 primarily as a result of the increase in our taxable income. Our effective income tax rate decreased from 15.3% for the year ended December 31, 2010 to 14.9% for the year ended December 31, 2011.

*Profit for the year.* As a result of the above factors, our profit for the year increased by 78.1% from RMB4,588 million for the year ended December 31, 2010 to RMB8,173 million (US\$1,300 million) for the year ended December 31, 2011. Our net margin increased from 14.2% for the year ended December 31, 2010 to 17.6% for the year ended December 31, 2011.

#### ***Year ended December 31, 2010 compared to year ended December 31, 2009***

*Turnover.* Our turnover increased by 55.1% from RMB20,762 million for the year ended December 31, 2009 to RMB32,193 million for the year ended December 31, 2010, primarily due to strong market demand for construction machinery, continuously extended marketing channels and developed new products. We derived the majority of our consolidated turnover from sales of concrete machinery and crane machinery, and the sales volume of which increased in 2010. Turnover from sales of concrete machinery increased by 96.8%, from RMB7,157 million in 2009 to RMB14,085 million in 2010, which was mainly attributed to increased sales volume of truck-mounted concrete pumps and concrete mixing plants. Turnover from sales of crane machinery increased by 33.5% from RMB8,298 million in 2009 to RMB11,077 million in 2010.

*Cost of sales and services.* Our cost of sales and services increased by 45.4% from RMB15,422 million for the year ended December 31, 2009 to RMB22,424 million for the year ended December 31, 2010,

*Gross profit.* As a result of the foregoing, our gross profit increased by 82.9% from RMB5,340 million for the year ended December 31, 2009 to RMB9,769 million for the year ended December 31, 2010, and our gross margin increased from 25.7% for the year ended December 31, 2009 to 30.3% for the year ended December 31, 2010 primarily due to our efforts to optimize product mix and improve manufacturing efficiency. In particular, the gross margin for concrete machinery and crane machinery,

*Net finance costs*

RMB8,302 million (US\$1,321 million), adjusted to reflect the interest expense of RMB616 million (US\$98 million) and depreciation and amortization of RMB306 million (US\$49 million), the following items: (i) an increase in trade and other receivables of RMB8,355 million (US\$1,329 million); (ii) an increase in inventories of RMB2,431 million (US\$387 million); (iii) an increase in receivables under

expansion of our sales and production and we managed to obtain longer credit terms from suppliers. In 2009, 2010, 2011 and the nine months ended September 30, 2012, our product sales under finance lease arrangement were RMB7,463 million, RMB9,720 million, RMB15,586 million (US\$2,480 million) and RMB11,925 million (US\$1,897 million), which accounted for 36.6%, 31.2%, 34.8% and 31.5% of our total product sales in the respective periods. For sales under the finance lease arrangement, proceeds from sales of our products are collected in monthly payments over the lease terms, which generally range from two to four years. Therefore, during the above periods where our finance lease business was in a high growth stage, the balance of our receivables under finance lease increased significantly, and our operating cash flow was negatively impacted. In 2009, 2010, 2011 and the nine months ended September 30, 2012, our product sales with installment payment options were RMB2,666 million, RMB5,090 million, RMB8,839 million (US\$1,406 million) and RMB10,355 million (US\$1,648 million), which accounted for 13.1%, 16.3%, 19.8% and 27.3% of our total product sales in the respective period. The strong increase in sales of our products with installment payment options in the nine months ended September 30, 2012 both in absolute terms and as a percentage of our total product sales was due to the general economic condition in China. In 2012, the economic growth in China slowed down and resulted in a decrease in the purchasing power of our customers, who in turn preferred to use installment payment options instead of making full payment when purchasing products from us.

In order to obtain cash to fund our operations, we factored a portion of our receivables under finance lease to banks. The cash proceeds we obtained from banks through factoring of receivables under finance lease with recourse terms in 2008, 2009 and the first three quarters of 2010 were presented as cash flow from financing activities as the conditions for de-recognition of the financial assets were not met, because we did not transfer the risks and rewards of ownership of the receivables.

machinery and forfeiture of related customer deposits in case of customer default), which we will continue to update based on stringent risk management principles, performance of our underlying business, relevant laws and regulations and prevailing market conditions. For a detailed description of the regulatory regime of the financial lease industry in China, please see “Regulatory Overview — Regulations as to Finance Lease Industry.”

For a discussion of the potential risks associated with our finance lease business and the various payment options we provide with our customers, see “Risk Factors — Risks Related to Our Company — We provide our customers with various payment options, including installment payment options, financial guarantees and finance lease services, which expose us to additional risks and uncertainties.” and “ — We recorded negative operating cash flow in 2009 and the nine months ended September 30, 2012 and there can be no assurance that we will record positive operating cash flow in the future.” To manage the risks associated with our finance leases, we established a risk control committee. In May 2012, in view of the general economic condition in China, we strengthened our risk management and collection efforts. We established a risk management committee at our headquarters to replace the risk control committee for finance lease services. The newly-established risk management committee is chaired by Dr. Sun Changjun and comprises a number of our senior management, including Dr. Su Yongzhuan, Ms. Hong Xiaoming and Mr. Guo Xuehong. We have also appointed an internal control director to oversee and supervise our risk management practices. Meanwhile, we expect that our customers’ preference with respect to payment options will continue to be affected by the general economic condition in China. In response to the continued increase in the sales of our products with installment payment options, we have strengthened our collection efforts and tightened our credit policies. Going forward, we will continue to maintain a robust risk management system to minimize our credit risks and enhancing our liquidity.

### ***Investing Activities***

Net cash used in investing activities in the nine months ended September 30, 2012 was RMB1,859

deposits of RMB773 million, and lease prepayments of RMB236 million. Payments for the purchase of property, plant and equipment and lease prepayments were related to our industrial parks construction

T T T T T

As of September 30, 2012, our commitments consisted of capital commitments that have been authorized and contracted for in the amount of RMB544 million (US\$87 million) and capital commitments that have been authorized but not contracted for in the amount of RMB1,976 million (US\$314 million), and operating lease commitments of RMB289 million (US\$46 million), of which RMB96 million (US\$15 million) was payable within one year.

As of September 30, 2012, we had contingent liabilities of RMB11,709 million (US\$1,863 million) in

^ T T

The table below sets forth the details of our current assets and liabilities at the end of each reporting period:

31,

Our future cash requirements will depend on many factors, including our operating income, costs to establish additional sales and service centers, market acceptance of our products and services or other changing business conditions and future developments, including any investments or acquisitions we may decide to pursue. We may require additional cash to repay existing debt obligations or to re-finance our existing debts or due to changing business conditions or other future developments. If our existing cash is insufficient to meet our requirements, we may seek to sell additional equity securities, debt securities or borrow from lending institutions. We cannot assure you that financing will be available in the amounts we need or on terms acceptable to us, if at all. The sale of additional equity securities, including convertible debt securities, would dilute our shareholders' interests in our Company. The incurrence of debt would divert cash for working capital and capital expenditures to service debt obligations and could result in operating and financial covenants that restrict our operations and our ability to pay dividends to our shareholders. If we are unable to obtain additional equity or debt financing as required, our business operations and prospects may suffer.

As of September 30, 2012, our outstanding short-term loans and borrowings, including the current portion of long-term loans and borrowings, amounted to RMB9,263 million (US\$1,474 million). The following table is a summary of our short-term and long-term loans and borrowings at the end of each reporting period:

			31,		30,	
	2009	2010	2011		2012	
			\$		\$	
			(	)		
Secured short-term bank loans	2,530	23	309	49	32	5
Unsecured short-term bank loans	3,726	4,211	4,490	714	6,046	962

Unsecured bond	1,090	1,091	1,093	174	1,094	174
Guaranteed senior notes	—	—	—	—	2,483 <sup>(1)</sup>	395
Less: Current portion of long-term bank loans	(2,297)	(3,873)	(1,250)	(199)	(3,185)	(507)
<b>T</b>	<b><u>5,621</u></b>	<b><u>7,690</u></b>	<b><u>7,099</u></b>	<b><u>1,123</u></b>	<b><u>,660</u></b>	<b><u>1,377</u></b>

(1) Representing the US\$400 million of outstanding principal amount of the 2017 Notes, excluding the offering expenses and discounts related to the 2017 Notes of approximately US\$8 million that will be amortized (and thereafter reflected as liabilities) over the tenor of the 2017 Notes.

As of September 30, 2012, our US dollar denominated unsecured short-term loans with an aggregate outstanding principal amount of RMB507 million (US\$81 million) and our US dollar denominated unsecured long-term loans with an aggregate outstanding principal amount of RMB970 million (US\$154 million), subject us to certain financial covenants. See "Description of Other Material Indebtedness." In 2009, 2010, 2011 and the nine months ended September 30, 2012 and as of the date of this offering memorandum, we were in compliance with those financial covenants. If we fail to

comply with such financial covenants and do not obtain a waiver from the lending bank, we could be required to repay the bank loan immediately and our liquidity could be adversely affected.

On April 5, 2012, we issued the 2017 Notes in the principal amount of US\$400 million through the Issuer. Interests on the 2017 Notes are payable semi-annually in arrears in April and October of each year. See “Description of Other Material Indebtedness — Guaranteed Senior Notes”.

In 2009, 2010, 2011 and the nine months ended September 30, 2012, our credit lines from various financial institutions amounted to RMB29.3 billion, RMB65.1 billion, RMB116.1 billion (US\$19 billion and RMB136.7 billion (US\$22 billion), respectively. As of September 30, 2012, approximately RMB76.8 billion (US\$13 billion) of our credit lines from 40 domestic and foreign financial institutions remained unused. In addition, 11 domestic financial institutions had granted us an aggregate of RMB28.1 billion (US\$4 billion) of credit lines under the non-recourse factoring arrangements in the same period, of which RMB7.4 billion (US\$1 billion) remained unused as of September 30, 2012.

**T T T T T T**

### ***Inventory Analysis***

Inventories are one of the principal components of our current assets. We typically keep higher levels of inventories of certain imported parts and components for which the supply may become limited. For finished goods, we determine the level of inventories based on our prediction of future market conditions. We believe maintaining appropriate levels of inventories for both raw materials and finished goods can help us manufacture and deliver our products without disruption to meet changes in market demand without straining our liquidity.

The following table is a summary of our balance of the carrying value of our inventories at the end of each reporting period:

	<u>2009</u>	<u>2010</u>	<u>31,</u> <u>2011</u>		<u>30,</u> <u>2012</u>	
			(	)		
					\$	\$
Raw materials .....	3,055	3,706	4,762	757	5,570	886
Work in progress .....	1,620	2,122	1,691	269	2,259	359
Finished goods .....	<u>1,597</u>	<u>2,850</u>	<u>3,203</u>	<u>510</u>	<u>4,259</u>	<u>678</u>
<b>T</b> .....	<b><u>6,272</u></b>	<b><u>,67</u></b>	<b><u>9,656</u></b>	<b><u>1,536</u></b>	<b><u>12,0</u></b>	<b><u>1,923</u></b>

The carrying value of our inventories increased by 38.4% from RMB6,272 million as of December 31, 2009 to RMB8,678 million as of December 31, 2010, by 11.3% to RMB9,656 million (US\$1,536 million) as of December 31, 2011 and by 25.2% to RMB12,088 million (US\$1,923 million) as of September 30, 2012. The increases in carrying value of our inventories were outpaced by the increases in our turnover for 2010 and 2011 because we were able to sell more machinery products as a result of the strong market demand. As of December 31, 2009, 2010 and 2011 and September 30, 2012, our inventories accounted for approximately 31.3%, 19.9%, 20.2% and 20.9% of our total current assets, respectively.

The following table sets forth our inventory turnover days for the periods indicated:

	2009	2010	31, 2011	30, 2012
Inventory turnover days <sup>(1)</sup> .....	135	122	107	116

*(1) Inventory turnover days equal the average inventory balance divided by cost of sales and services and multiplied by 365 days, or 273 days for the nine months ended September 30, 2012. Average inventory balance is calculated as the simple average of the opening and closing inventory balances as of each reported balance sheet date.*

Our inventory turnover days decreased from 135 days for the year ended December 31, 2009 to 122 days for the year ended December 31, 2010 and further decreased to 107 days for the year ended December 31, 2011, primarily due to the stronger market demand for our construction machinery products, our ability to sell more finished goods and our continued efforts to control the level of inventory by implementing an optimized production and procurement plan. For the nine months ended

As part of our ongoing control procedures, we monitor the creditworthiness of customers to which we grant credit in the normal course of business. Credit terms normally range from one to three months from the date of billing, except that for certain products, customers are allowed to withhold retention money amounting to 5% to 10% of the invoice amount until the product's warranty period expires. Credit exposure limits are established to avoid concentration risk with respect to any single customer. We allow certain customers with appropriate credit standing to make payments in installments over a period of up to 36 months. As of December 31, 2009, 2010, 2011 and September 30, 2012, our trade receivables due after one year amounted to RMB229 million, RMB585 million, RMB912 million (US\$145 million) and RMB3,405 million (US\$542 million), respectively.

Our net trade receivables increased by 37.3% from RMB5,061 million as of December 31, 2009 to RMB6,947 million as of December 31, 2010, by 66.4% to RMB11,563 million (US\$1,840 million) as of December 31, 2011, and further increased by 69.0% to RMB19,536 million (US\$3,108 million) as of September 30, 2012 as our sales continued to increase. The significant increase in our trade receivables in the nine months ended September 30, 2012 was primarily due to an increase in our sales with installment payment options both in absolute terms and as a percentage of our consolidated turnover. Meanwhile, we typically strengthen our collection efforts during the fourth quarter of a year.

The following table sets forth the turnover days of our trade receivables for the periods indicated:

	2009		31, 2010		31, 2011		30, 2012	
	2009	2010	2011	2012	2011	2012	2012	2012
Trade receivables turnover days <sup>(1)</sup> .....	82	73	77	109				

(1) Trade receivables turnover days equal the average balance of trade receivables divided by our consolidated turnover and multiplied by 365 days, or 273 days for the nine months ended September 30, 2012. Average balance of trade receivables is calculated as the simple average of the opening and closing trade receivable balances as of each reported balance sheet date.

Our trade receivables turnover days decreased from 82 days for the year ended December 31, 2009 to 73 days for the year ended December 31, 2010 as a result of our enforcement of a more stringent collection policy. Our trade receivables turnover days increased to 77 days for the year ended December 31, 2011, as we extended the credit period for certain customers that have better credit rating and repayment ability. For the nine months ended September 30, 2012, our trade receivable turnover days increased to 109 days as our sales with installment payment options increased both in absolute terms and as a percentage of our consolidated turnover, which in turn resulted in the increase in our trade receivables outpacing the growth of our consolidated turnover. In addition, a portion of our trade receivables at the end of the third quarter is typically collected during the fourth quarter, as we typically strengthen our collection efforts during the fourth quarter.

The following table sets out the aging analysis of our trade receivables (net of allowance for doubtful debts) as of December 31, 2009, 2010 and 2011 and September 30, 2012:

			31,		30,

**Receivables under Finance Lease Analysis**

The following table sets forth our receivables under finance lease at the end of each reporting period:

	31,				30,	
	2009	2010	2011	2011	2012	
				\$		\$
			(	)		
Gross investment . . . . .	9,190	17,841	22,135	3,522	24,387	3,880
Unearned finance income . . . . .	(847)	(1,669)	(2,126)	(338)	(2,367)	(377)
	8,343	16,172	20,009	3,184	22,020	3,503
Less: provision for impairment . . . . .	—	—	(140)	(23)	(229)	(35)
Less: amounts due after one year . . . . .	(5,060)	(9,775)	(12,780)	(2,033)	(13,806)	(2,197)
Amounts due within one year . . . . .	3,283	6,397	7,089	1,128	7,985	1,271

We receive the proceeds from our sales of products under finance lease arrangement through monthly installments. The minimum lease payments to which we are entitled but have not yet received under the finance lease contracts are accounted for as receivables under finance lease. Our receivables under finance lease represent gross investment by us less unearned finance income. The finance lease contracts we enter into are typically for a term of two to four years, with an option to our customers to acquire the leased assets at a nominal price at the end of the lease term. The effective interest rate under our finance lease contracts is affected by the prevailing interest rate in China, and was approximately 8% per annum as of September 30, 2012. The following table sets forth our minimum lease payment receivables under the finance lease contracts of the end of each reporting period:

	31,				30,	
	2009	2010	2011	2011	2012	

We monitor credit risk associated with our finance leases through various control measures. We perform individual credit evaluations with respect to each finance lease contract and our risk control committee is responsible for the establishment of credit risk management policies, supervision of the implementation of such policies and determination of the key terms of the finance lease contracts, including interest rate, lease period and percentage of deposit. In the nine months ended September 30, 2012, we made a provision for impairment of RMB229 million (US\$36 million) in respect of receivables under finance lease. In 2009, 2010, 2011 and the nine months ended September 30, 2012, the amounts of overdue receivables under finance lease were RMB94 million, RMB422 million, RMB464 million (US\$74 million) and RMB1,554 million (US\$247 million), respectively. In the nine months ended September 30, 2012, our overdue receivables under finance lease increased significantly primarily due to the slowdown in economic growth in China, which resulted in pressure on the liquidity of our customers. In response to the increase in the overdue receivables under finance lease,

(US\$790 million) as of December 31, 2011 to RMB6,975 million (US\$1,110 million) as of September 30, 2012. The increase in our bills payable during 2009 and 2010 was the result of an increase in our

Other than disclosed in this offering memorandum, we have not entered into any material off-balance sheet arrangements. In addition, we have not entered into any derivative contracts that are indexed to our equity interests and classified as owners' equity. Furthermore, we do not have any retained or contingent interest in assets transferred to an unconsolidated entity that serves as credit, liquidity or market risk support to such entity. We do not have any variable interest in any unconsolidated entity that provides financing, liquidity, market risk or credit support to us or that engages in leasing, hedging or research and development services with us.

The table below sets forth our transactions with related parties during the periods indicated:

	2010		31, 2011		2012		30, 2012
	2009	2010	2011	2011	2011	2012	\$
				\$			\$
Sales of products	(4)	(4)	(157)	(25)	2	596	95
Lease of properties and equipment	(3)	—	—	—	—	—	—
Purchase of raw materials and finished goods	10	39	148	24	45	454	72

In 2011 and the nine months ended September 30, 2012, as part of our sales and marketing strategy, we invested in several dealers, including newly-established dealers. These dealers were accounted for as our associated companies. All our sales to such dealers were recorded as sales of products to related parties. All purchases by Beijing Zoomlion Leasing in connection with finance lease arrangement with such dealers' down-stream customers were recorded as purchases from related parties.

We are of the opinion that the above transactions with related parties were conducted in the ordinary course of business and in accordance with the agreements governing such transactions which are comparable to normal commercial terms.

The table below sets forth our balances with related parties during the periods indicated:

	2010		31, 2011		2012		30, 2012
	2009	2010	2011	2011	2011	2012	\$
				\$			\$
Amounts due from related parties	29	27	99	16	173	28	
Amounts due to related parties	—	12	13	2	20	3	

Amounts due from/to related parties arise in our normal course of business and are included in the account captions of trade and other receivables and trade and other payables, respectively. These balances bear no interest, are unsecured and are repayable in accordance with the agreements governing such transactions which are comparable to credit periods with third-party customers/suppliers.

T

### ***Credit Risk***

Our credit risk is primarily attributable to bank deposits, trade and other receivables, and receivables under finance leases. The maximum exposure to credit risk is represented by the carrying amounts of these financial assets.

In respect of trade and other receivables, individual credit evaluations are performed on all customers requiring credit over a certain amount. These evaluations focus on the customer's background and financial strength, past history of making payments when due and current ability to pay, and take into account information specific to the customer as well as the economic environment in which the customer operates. Trade receivables under full payment arrangement are normally due within 1 to 3 months from the date of billing, and an upfront payment ranging from 10% to 30% of the product price is normally required from the customers. For sales under the installment payment method that has a maximum installment payment period of 36 months, customers are required to make an upfront payment ranging from 10% to 40% of the product price. Collateral such as property, machinery or third party guarantees is generally required for customers with lower credit ratings. In addition, credit insurance coverage is required for overseas sales. Certain customers are required to pay by letters of credit. Debtors overdue by 3 months or more are handled by our risk management department, which is responsible for recovering debts through legal and other actions.

In respect of receivables under finance lease, individual credit evaluations are performed which are similar to those of credit and installment sales. A risk control committee for finance lease services was established for the establishment of credit risk management policies, supervision of the implementation of such policies and determination of the key terms of the lease contracts, including interest rate, lease period and percentage of deposit. In May 2012, in view of the general economic condition in China, we have strengthened our risk management and collection efforts. We established a risk management committee at our headquarters to replace the risk control committee for finance lease services. The newly established risk management committee is chaired by Dr. Sun Changjun, and comprised of a number of our senior management. We also appointed an internal control director to oversee and supervise our risk management practices. Our credit review department, legal department, finance department and information technology department are collectively responsible for credit risk management and monitoring of settlement of receivables under finance lease. Our credit risk management procedures include pre-lease investigation, lease approval, lease payment collection and

### Interest Rate Risk

Our exposure to interest rate risk primarily arises from bank deposits, receivables under finance lease, short-term and long-term loans and borrowings. Such financial instruments bearing interest at variable rates and at fixed rates expose our Company to cash flow interest rate risk and fair value interest rate risk, respectively. We have not used any derivative financial instruments to hedge our interest risk exposure. The following table sets out the interest rate profile of our bank deposits, receivables under finance lease and loans and borrowings at the end of each reporting period:

	31,						
	2009		2010		2011		
	%		%		%		\$

		<u>6,197</u>		<u>23,218</u>		<u>26,876</u>	<u>4,276</u>
		<u>(1,403)</u>		<u>20,893</u>		<u>24,472</u>	<u>3,894</u>

### ***Currency Risk***

We are exposed to currency risk primarily through sales, purchases and borrowings which give rise to receivables, payables, loans and borrowings and cash balances that are denominated in a foreign currency, that is, a currency other than the functional currency of the operations to which the transactions relate. The currencies giving rise to this risk are primarily the US dollar, the Japanese Yen, the Euro and the Hong Kong dollar. During 2009, 2010, 2011 and the nine months ended September 30, 2012, we did not hedge our foreign currency exposures. We are not currently hedging our foreign currency exposures.

We are a leading China-based construction machinery manufacturer providing diversified products, including concrete machinery, crane machinery and environmental and sanitation machinery, with a presence in Asia, Europe and other regions. We have one of the most diversified and comprehensive

machinery in China. We have contributed to the establishment of over 170 national and industry standards that are currently in effect, including the first industry standard for truck-mounted concrete pumps in China and the industry standard for chassis specially designed for truck cranes. In addition, our technology center has been jointly accredited as a national technology enterprise center by the NDRC, the Ministry of Finance, the General Administration of Customs and the State Administration of Taxation since 2005. We also own and operate the National Key Laboratory on Key Technologies for Construction Machinery, the only national key laboratory in China's construction machinery industry, as well as the National Engineering Technology Research and Development Center for Concrete Machinery, the only national concrete machinery engineering technology research and development center in the construction machinery industry.

We have experienced significant growth benefiting from China's ongoing urbanization. Our consolidated turnover increased from RMB20,762 million in 2009 to RMB46,323 million (US\$7,371 million) in 2011, and our profit for the year increased from RMB2,419 million in 2009 to RMB8,173 million (US\$1,300 million) in 2011. In the nine months ended September 30, 2012, our consolidated turnover amounted to RMB39,108 million (US\$6,222 million) and our profit for the period amounted to RMB7,127 million (US\$1,134 million). Our A Shares have been listed on the Shenzhen Stock Exchange since October 12, 2000 and our H Shares have been listed on the Hong Kong Stock Exchange since December 23, 2010, respectively. On December 11, 2012, our market capitalization was approximately US\$10.6 billion.

We believe that the following competitive strengths have contributed to our success and will continue to enable us to capitalize on future growth opportunities in the global construction machinery industry.

***Leading China-based Construction Machinery Manufacturer with an Established Global Presence and Strong Brand Recognition***

We are a leading China-based construction machinery manufacturer that has grown rapidly by capitalizing on China's ongoing urbanization and significant growth in the infrastructure sector. We enjoy a leading market position across substantially all of our core product lines in China, including concrete machinery and crane machinery. According to CCMA, we were the second-largest construction machinery manufacturer in China and the eighth largest construction machinery manufacturer in the world in terms of turnover in 2010. According to China Construction Machinery Magazine, we ranked fifth globally as a manufacturer of mobile cranes, including truck cranes, tyre cranes and crawler cranes, in terms of turnover in 2010. Furthermore, according to CCMA, we ranked first as a manufacturer of medium- to large-capacity tower cranes in terms of turnover in 2010, and second as a manufacturer of truck-mounted and trailer-mounted concrete pumps and truck cranes and fourth in crawler cranes in terms of sales volume in 2009, among all China-based construction machinery manufacturers. We believe our leading position will enable us to continue to capitalize on the rapid economic growth in China in the future.

We believe we are among the first China-based construction machinery manufacturers to have established a global operational and research platform and sales and distribution network. Our products

are currently sold to over 120 different countries through our strong overseas distribution and service network which, as of September 30, 2012, consisted of 52 outlets, 73 service centers and 23 parts and components depots owned and operated by us, as well as 120 outlets, 140 service centers and 60 parts and components depots owned and operated by our 62 third-party dealers. We have also established research and development facilities in China and Italy, which grant us access to advanced technologies and a large pool of highly skilled engineering and technical personnel. CIFA, one of our subsidiaries, is a major global concrete machinery manufacturer based in Italy, as evidenced by its 80 years of history, advanced proprietary technology, including its carbon fiber boom technology, and strong research and development capabilities in the concrete machinery sector. The acquisition of CIFA has enabled us to integrate CIFA's extensive distribution and service network in Europe, its strong research and development capabilities and its proprietary technologies, and helped us become a leading concrete machinery manufacturer in the world. In August 2012, we entered into a framework agreement with ElectroMech, a leading crane machinery manufacturer in India, to establish a subsidiary to manufacture tower cranes, in which we own a 70% interest. We believe that the cooperation with ElectroMech and the establishment of the tower crane factory will enable us to combine the strong local presence of ElectroMech and our expertise in crane machinery to capture the expected growth in demand for crane machinery in India.

We have two widely recognized brands, Zoomlion and CIFA. Our leading market position in the construction machinery industry in China, together with the high quality of our products and advanced technology features have rewarded us with strong recognition of our Zoomlion brand in China. We believe our Zoomlion brand is widely regarded by our Chinese customers as representing innovation, reliability and integrity. Two of our trademarks were recognized as "Well-Known Trademarks" in China. Our Zoomlion brand has also received international recognition as evidenced by the sales and export of our products in certain overseas countries and regions and we believe we are among the first few China-based construction machinery manufacturers to have gained such international recognition. As of September 30, 2012, we maintained 407 trademark registrations of our Zoomlion brand overseas. In addition, our CIFA brand has been a well-recognized brand in the global concrete machinery industry, representing advanced design and technology and our CIFA-branded products have enjoyed a leading global market position. This differentiation in perception enable0.1(i0entiationfcustomkployfcustoais)-310(quF products thei-e(and)-289.1(m)-1.1(arkia.)]TJ0-3.1Tc [(We38550.2(believe)-579.2(our)-651. [(leading)8544.m(t)-1.a(arl

China. We31290.curferedely fthee

China. In response to the changing market demand and customer needs, we are also committed to designing and producing new and innovative products. Our broad range of product offerings in and across product lines can satisfy various needs of our customers and are complementary to each other in certain cases, which help us to provide complete and systematic solutions for our customers. For example, in our concrete machinery product line, we offer concrete mixing plants, truck-mounted concrete mixers, concrete pumps and concrete placing booms, thereby satisfying our customers' needs that may arise throughout the full concrete production process, including mixing, transportation, pumping and placing. We believe our diversified and comprehensive product offerings position us well to take advantage of the future development of the domestic and overseas construction machinery markets.

Leveraging our broad range of products offerings, we are able to provide our customers with systematic solutions that can satisfy their specific needs, which have helped and will continue to help

industry. We believe our active participation in setting industry standards and our nationally accredited research and development laboratories allow us to be an industry leader in addressing prevailing market trends and developing products with industry-leading technologies.

We have strong research and development and innovation capabilities stemming from our historical roots with the Research Institute, a leading state-owned research and development institution for construction machinery in China for over 50 years. In 2009, 2010, 2011 and the nine months ended September 30, 2012, we obtained 71, 152, 231 and 933 patents, respectively. As of September 30, 2012, we held 1,530 effective patents in China. Since we commenced operations, we have brought 78 new types of machinery to the market. In 2009, 2010, 2011 and the nine months ended September 30, 2012, we offered 238, 224, 257 and 161 new models of machinery, respectively. We currently hold numerous world-class core technologies in the construction machinery industry, including our advanced high-pressure concrete pumping technology and our placing boom design, which significantly increase the maximum height our concrete pumps can reach, and our proprietary single-cylinder multi-level telescopic boom design and control technologies, which reduce the weight and increase the reliability and accuracy of the boom for our crane machinery. In addition to the product-specific efforts, we are also committed to the research and development of technologies with general applications across different product lines, such as those relating to welding of high-strength steel, metal structural strength and fatigue resistance, hydraulics and transmission and intelligent control. We are able to leverage the results achieved in such research endeavors to upgrade and enhance the overall performance of our products. In addition, CIFA has leading research and development capabilities in Europe with over 80 years of experience in concrete machinery. We have been selectively applying CIFA's proprietary technologies to our Zoomlion line of concrete machinery. For example, we have introduced the carbon fiber concrete placing boom technology to our truck-mounted concrete pumps, which significantly reduces the weight of the boom and consequently improves its fuel efficiency levels. Our truck-mounted concrete pumps with long carbon fiber concrete placing booms have gained wide market acceptance and have driven the increase in the profitability of our concrete machinery. We have also introduced the K-Tronic electrical control systems, which is capable of coordinating the concrete placing boom and the stabilizer in our concrete machinery products.

We currently employ over 4,200 engineering and technical personnel. We believe our corporate culture of strong commitment to research and development has created a strong degree of employee loyalty from our research and development team. Our core research and development team has 28 chief research personnel who have spent an average of more than ten years with us. We believe our dedicated and stable research and development team and prevailing corporate culture, which fosters an environment of innovation and excellence, will serve as key elements driving our long-term growth.

### ***Highly Competitive Cost Structure and Product Quality Control System***

Our large-scale operations enable us to enjoy economies of scale and maintain a reliable, cost-effective manufacturing line and high-quality supply chain. Leveraging our purchasing power, we are able to enter into strategic cooperation framework agreements with certain suppliers of key raw materials, parts and components that are important to our manufacturing process. Such agreements allow us to procure quality raw materials, parts and components at relatively competitive prices on a sustainable basis. In addition, we are able to attract certain suppliers to establish their manufacturing facilities in proximity to our assembly facilities so that we can closely monitor the quality of the parts and

components and minimize the transportation and inventory and storage costs. Through the acquisition of key parts and components manufacturers, we are also able to further secure a stable supply of high quality parts and components.

With a focus on resource integration, our advanced management system helps us achieve optimal resource allocation and highly effective cost control. We have established specialized industrial parks and factories to manufacture and assemble various products to increase efficiency and enhance product quality. To avoid duplication of processing facilities in our different specialized industrial parks and factories, we also group certain pre-assembly processing and treatment steps of the raw materials, parts and components, such as coating, before dispatching to the specialized industrial park for assembly. In addition, we put together our production and procurement plans in accordance with our master

We provide comprehensive after-sales services through our outlets and dealers in our distribution network, including various value-added services aimed at lowering costs for our customers and increasing their productivity and operating efficiency. Our value-added services include the provision of on-site technical and product training sessions for the use and maintenance of our products, preventive maintenance and diagnostics, the procuring of product insurance and other necessary certifications, and the remanufacturing of existing products upon a customer's request. We implement a "24 Hours On-call" policy that aims to respond to customers within 24 hours. We also provide on-site consultation support to our customers within two hours for urban areas covered by our service centers.

### ***Proven Ability to Acquire and Integrate Strategic Targets to Augment Our Growth***

We have supplemented the organic growth of our business with domestic and overseas strategic acquisitions during the last several years. In order to broaden our product offerings, we have made several acquisitions in China, and we have successfully integrated those businesses into our existing operations and effectively increased their sales and profitability. For example, in 2003, we acquired Hunan Puyuan Construction Machinery Co., Ltd. with its truck crane business. Leveraging our large-scale operations, cost-effective manufacturing facilities and strong research and development capabilities, as evidenced by our active involvement in research projects and national government research and development initiatives since 1999, we were able to strengthen the market positions of those products. Currently, these acquired businesses have become integral parts of our core business and we have achieved a leading market position for those acquired product lines in China. In order to strengthen our global operations and increase our market share in the global concrete machinery market, we acquired CIFA in 2008 and have integrated its businesses into our existing operations. For example, CIFA's research and development capabilities have been integrated into our concrete machinery research and development platform, and certain manufacturing facilities in Changsha, Hunan Province have been used to produce certain components for our CIFA products. In addition, we currently sell our CIFA line of products in China through our extensive distribution network. The CIFA acquisition is the largest outbound acquisition by a Chinese construction machinery manufacturer so far. The integration of CIFA into our business has enabled us to strategically combine CIFA's well recognized brand, global sales and distribution network, innovative technology and experienced management team with our leading market position and our manufacturing expertise in China, thereby strengthening our leading market position in concrete machinery and better positioning us to capture the growth opportunities globally.

With our extensive experience in strategic acquisitions and integration of acquired businesses in China and overseas markets, we have established sound approaches and principles with respect to strategic acquisitions. We focus on domestic targets that can broaden our existing range of products and help us achieve a leading market share for such products, and focus on overseas targets that can further strengthen our existing product offerings and global footprint. Furthermore, we believe that the strong recognition of our Zoomlion and CIFA brands in the overseas markets will give us a competitive edge over other potential bidders and/or buyers for future acquisitions and alliances. We believe that the global construction machinery industry will continue to experience consolidation and, as such, our acquisition principles together with our hands-on experience and proven execution capability will enable us to capitalize on this trend.

### ***Experienced Management Team with Proven Track Record and Strong Corporate Governance***

Our management team has in-depth industry knowledge and sector expertise, with an average of approximately 20 years of experience in the construction machinery industry, and has successfully led our operations. Dr. Zhan Chunxin, chairman of our Board of Directors and our chief executive officer, has over 32 years of experience in the construction machinery industry. Dr. Zhan was recognized as a CCTV Economic Figure of 2011. Dr. Zhan was also awarded the 2010 International Leonardo Award, which commends those persons who have made contributions to Italy's economy, culture and technology, in recognition of Zoomlion's acquisition of CIFA. In 2010, Dr. Zhan received the Yuan Baohua Gold Award, the most distinguished award for corporate executives in China from the China Business Administration Science Foundation, a foundation focused on improving business administration and management and corporate governance of Chinese enterprises. In 2005, 2006 and 2009, our Board of Directors received the Golden Roundtable Award, an award for outstanding boards of directors from Directors and Boards, a Chinese magazine focusing on board practices and corporate governance. We believe the industry knowledge, operating experience and technological know-how of our Directors and senior executives provide the strong leadership necessary to sustain our future growth.

We have established a strong corporate culture focused on fostering collaboration, innovation, integrity, transparency, professionalism, excellence, accountability and maintaining strong, long-term customer relationships. We believe that our corporate governance standards and culture will continue to serve as the key elements for the future development of our Company.

### ***T T***

We aim to become the largest Chinese construction machinery manufacturer, and one of the top five global construction machinery manufacturers offering comprehensive and diversified products and systematic solutions in different sectors, including construction machinery and various other machinery industries to capitalize on China's increasing trends of urbanization and industrialization, as well as growth opportunities around the world. We intend to achieve this objective by pursuing the following strategies:

#### ***Solidify and Strengthen Our Leading Market Position in China***

We will continue to solidify and strengthen our leading market position in China's construction machinery industry and capitalize on the expected continued strong economic growth and ongoing urbanization in China. In particular, to further improve our core competence and optimize resource allocation, we will optimize our product focus by further strengthening our core product lines, namely the concrete machinery and crane machinery product lines. We aim to become the largest Chinese construction machinery manufacturer.

We plan to further expand our distribution network in China, particularly in second- and third-tier cities and in the central and western regions, where we believe there will be stronger demand for our products due to the faster rate of urbanization, stronger economic growth and higher expected level of

construction activity in the near to medium term. In particular, we aim to focus our sales and marketing efforts in these markets on concrete machinery and crane machinery. In addition, we plan to form strategic alliances with certain major customers, third-party dealers and finance lease services providers to increase our market share. For example, we will continue to strengthen our relationships with existing third-party dealers and help them to strengthen their after-sale services and quality

We plan to expand our operations internationally through strengthening our overseas distribution and service network and selective strategic acquisitions and alliances with certain overseas targets that (i) can increase the sales of our existing product lines overseas, (ii) can significantly increase the geographic coverage of our distribution and service networks, (iii) have advanced technologies, or (iv) offer products with strong market potential. We believe such strategic acquisition focus will enable us to achieve greater operational synergies.

### ***Enhance Our Global Research and Development Platform and Efforts***

We aim to expand our global research and development platform to strengthen our innovation capabilities and integrate our research and development resources across the globe. We aim to focus on establishing additional research facilities in the United States and Europe in the next three to five years, which we believe will provide us with a better understanding of local market demands, better access to advanced technologies and facilities as well as world-class talent. Furthermore, we plan to use CIFA's research center and personnel as a base for growing our research and development capabilities in Europe. The research facility in the United States will focus on concrete machinery and crane machinery, and the one in Europe will focus on crawler cranes, all-terrain truck cranes, truck cranes, derrick cargo trucks and aerial working platforms. We will also consider opportunities to cooperate with certain overseas companies, top universities or independent research facilities. We will introduce those advanced technologies developed by our overseas research facilities into our manufacturing bases in China, enabling us to provide such innovations to our domestic and overseas customers at a more affordable price. For example, we have introduced concrete pumps with carbon fiber booms developed at CIFA's research center to the PRC market.

We will continue to develop new products and additional features in response to changes in customer needs, industry trends and business conditions. We will focus on developing products with better safety and reliability, higher fuel efficiency and larger capacity. In addition, we plan to strengthen our research and development efforts for our key parts and components, including initiatives to improve the quality and standardization levels of the key parts and components used across our product lines, including hydraulic cylinders, hydraulic valves, chassis for concrete pumps and truck-mounted concrete mixers. Furthermore, we will strengthen our research and development initiatives aimed at streamlining our manufacturing and assembly processes.

### ***Continue to Broaden Our Product Offerings and Strengthen Our Manufacturing Capabilities***

We are committed to expanding our product offerings in each product line and broadening our

- § In the crane machinery product line, we will continue to optimize our product mix and develop products with higher maximum lifting capacity, and further strengthen our manufacturing capabilities. We are currently upgrading the manufacturing technology and optimizing the manufacturing process of large-capacity crane machinery, including large-capacity truck cranes, crawler cranes and tower cranes. We also plan to develop products suitable for welfare housing.
- § In the earth moving machinery product line, we plan to increase our manufacturing capacity in medium- and large-capacity excavators in order to gain a significant market share in China.
- § We aim to further expand our product offerings, based on the prevailing industry trends and our strategic targets, into more industries, such as compact multi-functional construction machinery and emergency rescue machinery. We are currently constructing a manufacturing line for emergency rescue machinery, including aerial emergency rescue machinery, road emergency rescue machinery and underground emergency rescue machinery.

We aim to further strengthen our manufacturing capabilities through various optimization measures in order to offer technologically advanced products at a reasonable cost. For example, we are in the process of implementing lean, flexible and zero-defect manufacturing measures so that we can optimize the utilization rates of our production lines and our inventory levels while improving our product quality. We plan to optimize our supply chain management by increasing the in-house manufacturing capability of key parts and components, such as hydraulic pumps, valves and cylinders and chassis by acquiring manufacturers of such key parts and components.

#### ***Prudently Manage the Expansion of Our Finance Lease Services***

We will continue to prudently manage the expansion of our finance lease services as an alternative payment option. For products that have typically been subject to finance lease services in China, such as concrete machinery and crane machinery, we expect our finance lease services will increase in proportion to the growth of our business. For other products, we intend to begin offering finance lease services as a payment option for our customers. We have obtained the relevant licenses and/or permits to provide finance lease services in the PRC, Hong Kong, Australia, Italy, Russia, United States and

## T

We are engaged in the design, research and development, manufacturing and sale of concrete machinery, crane machinery, environmental and sanitation machinery, road construction and pile foundation machinery, earth working machinery, material handling machinery and systems and other types of machinery products. Since we commenced operations, we have brought 78 new types of machinery to the market. In 2009, 2010, 2011 and the nine months ended September 30, 2012, we offered 238, 224, 257 and 161 new modelsw(238,)-382 16(an.1(a)8,)-382 16(an.-3ilfacy..23.2(16)-0.3.2(16curr)-5ly..

## Concrete Machinery

We offer a wide range of concrete machinery used for the production, transportation and laying of concrete in various commercial and residential construction sites and infrastructure projects, primarily including truck-mounted concrete pumps, truck-mounted line concrete pumps, truck-mounted concrete mixers, trailer-mounted concrete pumps, concrete placing booms and concrete mixing plants. Our concrete machinery is comprised of two product lines: Zoomlion and CIFA, the latter of which we acquired in September 2008. Set forth below are pictures and key features of our major concrete machinery products:

---

### Truck-mounted concrete pumps

#### Zoomlion

#### CIFA

- § Transport and deliver concrete through a hose attached along a folding boom with a jib that can be rotated in various angles and directions.
- § 39 models under the Zoomlion brand and 17 models under the CIFA brand with different folding boom lengths, concrete pumping heights and concrete output capacities.
- § Enhanced strength and reliability of the folding boom through the use of selected materials combined with our proprietary technology.
- § Industry-leading maximum concrete pumping capacity.
- § Folding boom length ranging from 22 to 101 meters.
- § Industry-leading nominal output capacity ranges from 60 to 200 cubic meters per hour as a result of our proprietary pumping combined

---

## TOWER CRANES

### Zoomlion

### CIFA

### CONCRETE PLACING BOOMS

### Zoomlion

§ Deliver and pump concrete.

§ Higher maximum concrete delivery height compared with our truck-mounted concrete pumps.

§ 19 models under the Zoomlion brand and nine model under the CIFA brand with different concrete output capacity, maximum pressure on concrete and type of driving power.

§ Maximum nominal concrete output capacity ranging from 26 to 136 cubic meters per hour.

§ Maximum pressure on concrete ranging from 7 to 48 MPa.

§ Used in conjunction with various types of concrete pumps for the delivery and pouring of concrete.

§ 10 models under the Zoomlion brand with different mounting structures, folding boom lengths and heights of the placing boom.

§ Our line of products includes independent, self-climbing, ship-mounted, tower and special types of concrete placing boom.

§ Maximum placing boom length ranging from 16 to 45 meters.

§ Maximum height up to 200 meters.

---

Zoomlion Concrete Mixing Plant

Zoomlion

§ We provide the full set of equipment and machinery for concrete mixing plants. We also design the plants and install and commission the equipment, and we are responsible for the actual construction of concrete mixing plants.

§ Capable of mixing hard concrete, semi-hard concrete, plastic concrete and other kinds of concrete in different ratios.

§ 52 models under the Zoomlion brand.

§ Maximum nominal concrete production capacity that ranges from 45 to 300 cubic meters per hour.

Transportation of concrete

Zoomlion

CIFA

§ Transport concrete from the concrete mixing plant to the construction site while continuously mixing the concrete during transport.

§ 41 models under the Zoomlion brand with different mixer drum capacity.

§ Capacity of mixer drum ranging from 6 to 15 cubic meters.

---

## Truck-mounted concrete pumps

§ Our truck-mounted line concrete pumps combine the mobility of our truck-mounted concrete pumps with the broader delivery range of our concrete pumps.

§ Four models under the Zoomlion brand.

§ Concrete output capacity ranging from 40 to 100 cubic meters per hour.

§ Maximum output pressure for concrete that ranges from 10 to 22 MPa.

## Truck-mounted concrete pumps

§ Designed for the

§ Capable of moving materials and equipment on rough or uneven terrain, and are often located for long periods of time on a single construction or work site such as a building site, highway or utility project.

§ 18 models with a maximum lifting capacity that ranges from 50 to 3,200 tons.

§ A type of construction machinery used on the long-term construction sites of high-rise buildings, water conservancy projects, railways, nuclear power plants, thermal power plants, hydropower stations and other industries.

§ Includes a vertical tower with a horizontal jib with a counterweight at the top. On the jib is a trolley which runs a load carrying cable that moves the load along the jib length.

§ 41 models.

§ Maximum working radius ranging from 50 to 80 meters.

§ Maximum load ranging from 804 to 5,316 KN-m.

§ A type of construction machinery using cages to transport labor and objects up and down along the rails, widely used in construction and building industries.

§ Total of two major series including SC series of ordinary construction lifts, and SC series of frequency conversion construction lifts.

§ Rated load ranging from 1000 to 2000 kilograms.

§ Rated lifting speed ranging from 36 to 100 meters per minute.

## ***Environmental and Sanitation Machinery***

Environmental and sanitation machinery is used for the cleaning and maintenance of urban areas as well as processing domestic solid waste. We offer a wide range of environmental and sanitation machinery, including road sweepers, washing vehicles, waste treatment equipment, including garbage compactors and transporting stations, refuse compression and transfer vehicles, sewer dredging maintenance vehicles and snow removal vehicles. Set forth below are pictures and key features of our major environmental and sanitation machinery products:

Š

---

Refuse Compression and Transfer Vehicle

Kitchen Waste Disposal System

Sewer Dredging Maintenance Vehicle

§ Vertical and horizontal refuse compression collecting and transfer complete equipment for waste treatment stations, with daily processing capacity ranges from 60 to 250 tons per day.

§ 69 models of refuse compression and transfer vehicle.

§ Nine models of kitchen waste disposal system with different processing capacity.

§ Eight models of snow removal vehicle.

§ 14 models of sewer dredging maintenance vehicle.

## Road Construction and Pile Foundation Machinery

We offer a wide range of road construction machinery, including road surface heaters, graders, road rollers, pavers, road surface cold planers and asphalt mixing equipment, used for the construction and maintenance of roads and highways. We also offer pile foundation machinery, which is currently primarily comprised of rotary drilling rigs. Set forth below are pictures and key features of our major road construction and pile foundation machinery products:

<p>ASPHALT HEATERS</p> 	<p>§ Used to heat asphalt to a high temperature in order for the asphalt to bind with the other materials used in road pavement.</p> <p>§ Heating width ranges from 2.8 to 4.5 meters.</p>
<p>ROAD GRADERS</p> 	<p>§ Used to create a flat surface during road construction.</p> <p>§ Three models with maximum torque ranging from 701.5 to 946 N-m.</p>
<p>ROAD ROLLERS</p> 	<p>§ Four models of double-drum road roller, 17 models of single-drum road roller and three models of tire road roller with different drum width, vibrating power and operation weight.</p>
<p>ROAD PAVERS</p> 	<p>§ 24 models with various paving width.</p>
<p>ROAD SURFACE COLD PLANERS</p> 	<p>§ Used to remove worn or deteriorated pavement to a specified grade and slope that can be opened immediately to traffic or overlay with new asphalt.</p>
<p>ASPHALT MIXING EQUIPMENT</p> 	<p>§ Six different models with various maximum milling width and maximum delivery capacity.</p>

Product	Description
	<p>§ Six models of mini-excavator meeting the Euro II Emission Standard.</p> <p>§ Easy to adjust the power output in accordance with different working loads and reduce fuel consumption of the engine.</p>
	<p>§ 23 models with different maximum net flywheel power, blade length and loading capacity.</p>
	<p>§ Used to shovel, load and deliver bulky materials.</p> <p>§ Two models with maximum loading capacity of 3.2 cubic meters and maximum designed loading power of 6.5 tons.</p>

***Material Handling Machinery and Systems***

We are dedicated to the research and development, designing, manufacturing, installation and general contracting of bulk material handling equipment, port automation equipment, lifting equipment and bulk material handling systems. Our primary stand-alone products include: stacker and reclaimers, pipe conveyors, port loading/unloading equipment and portal cranes. Set forth below are pictures of our major material handling machinery products:

**Other Machinery Products**

We manufacture other types of machinery products, mainly including special vehicles and vehicle axles. Our special vehicles include derrick cargo trucks, aerial working platform vehicles, cable trucks, container cranes, articulated mobile cranes for smaller containers, tyre cranes, reach stackers, road wreckers and roll-off dump trucks. Our axles are widely used for the manufacturing of construction vehicles and commercial vehicles. We currently offer two main types of vehicle axles. We currently offer 14 models of axles for construction vehicles and 46 models of axles for commercial vehicles with various fixed loads. Set forth below are pictures of our major special vehicles and axle products:

### *Manufacturing Facilities and Production Capacity*

We have established specialized industrial parks and factories to manufacture and assemble various products to increase efficiency and enhance product quality. We currently own and operate a total of 13 specialized industrial parks, of which 12 are located in China and one located in Italy. We also operate three specialized factories located in Liaoning Province, Sichuan Province and Guangdong Province, China. Meanwhile, phase two of our Weinan industrial park is expected to be completed and commence production by the end of 2012. In addition, we plan to establish another specialized industrial park at Jiangyin, Jiangsu Province with an approximate gross floor area of approximately 1,730,000 square meters to manufacture and assemble crawler cranes and excavators. We have also entered into a joint venture agreement with ElectroMech, a leading crane machinery manufacturer in India, to establish a subsidiary to manufacture tower cranes, in which we will own a 70%. Furthermore, we plan to establish additional manufacturing facilities in Brazil and Russia. The table below sets forth certain information relating to our existing facilities:

			( 2 )	
Guanxi Industrial Park	Guanxi, Hunan Province, China	August 2008	220,804	Cranes, concrete machinery and others
Lugu Industrial Park	Changsha, Hunan Province, China	August 2005	363,061	Concrete machinery, crawler crane and others
Huayin Industrial Park	Huayin, Shaanxi Province, China	January 2002 <sup>(1)</sup>	126,673	Earth working machinery
Quantang Industrial Park	Changsha, Hunan Province, China	July 1997 <sup>(2)</sup>	175,488	Mobile cranes
Maqiaohe Industrial Park	Wangcheng, Hunan Province, China	November 2007	38,840	Road construction Machinery
Yuanjiang Industrial Park	Yuanjiang, Hunan Province, China	December 2007	52,213	Concrete Machinery
Zoomlion Industrial Park	Changsha, Hunan Province, China	September 1992	42,790	Environmental and sanitation machinery <sup>(3)</sup>
Songjiang Industrial Park	Shanghai, China	May 2010	60,049	Rotary drilling rigs
Hanshou Industrial Park	Hanshou, Hunan	December 2011 <sup>(4)</sup>	160,000	Concrete mixing plants and special vehicles
Weinan Industrial Park	Weinan, Shaanxi	December 2010 <sup>(5)</sup>	102,941	Excavators
Cheqiao Industrial Park	Changde, Hunan	January 2004 <sup>(6)</sup>	120,000	Axles
Deshan Industrial Park	Changde, Hunan	May 2008 <sup>(7)</sup>	22,262	Hydraulic parts
CIFA Industrial Park	Senago, Italy	May 2006 <sup>(8)</sup>	290,000	Concrete machinery
Shenyang Factory	Shenyang, Liaoning Province, China	March 2012	55,000	Tower crane and construction lift
Chengdu Factory	Chengdu, Sichuan Province, China	March 2012	48,000	Tower crane
Guangzhou Factory	Guangzhou, Guangdong Province, China	February 2009	20,000	Tower crane

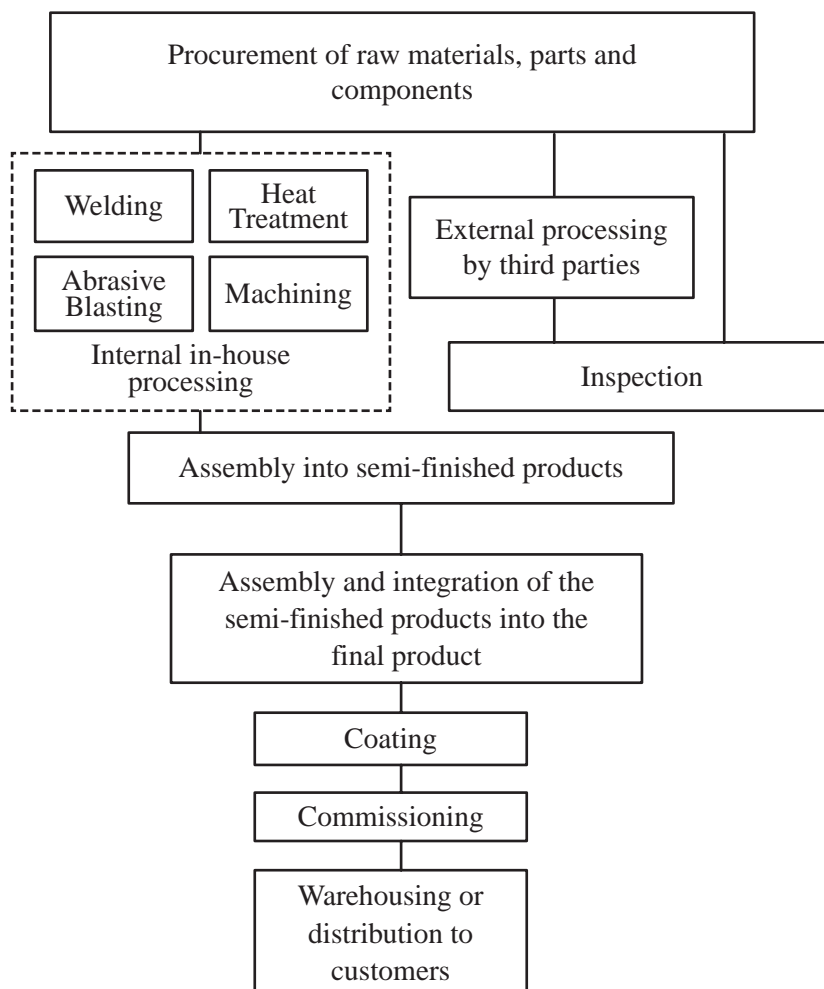

- 
- (1) The establishment date of Shaanxi Zoomlion Earthmoving Machinery Co., Ltd., which was acquired by the Company in June 2008.
  - (2) Acquired by the Company in November 2003.
  - (3) On March 15, 2012, we passed a board resolution approving the disposal of 80% equity interest in the ESM Company, our wholly-owned subsidiary principally engaged in our environmental and sanitation business, by way of a public tender on Hunan Province Equity Exchange. For details, please see “Our History and Corporate Structure — Proposed Disposal of Our Subsidiary”. Upon completion of the proposed disposal, we plan to lease the manufacturing facilities for environmental and sanitation machinery in the Zoomlion Industrial Park to the ESM Company.
  - (4) The date of the commencement of pilot production.
  - (5) Phase two is expected to be completed and commence production of tower cranes by the end of 2012.
  - (6) Acquired by the Company in June 2008.
  - (7) Acquired by the Company in December 2008.
  - (8) The establishment date of CIFA, which was acquired by the Company in September 2008.

To continue supporting our growth, we have undertaken and will continue to expand our manufacturing capabilities so as to meet the market demand for our products and the manufacturing capacity for key parts and components used in our products. For example, we are currently expanding our manufacturing facility at Quantang Industrial Park for large-capacity truck cranes and all-terrain truck cranes. We expect to complete the expansion of our manufacturing capacities at Quantang Industrial Park by the end of 2013. We are also in the process of expanding or upgrading the Maqiaohe Industrial Park, Songjiang Industrial Park and Deshan Industrial Park. We believe that our manufacturing facilities are well maintained, in good operating condition and suitable for their current purposes. Meanwhile, we plan to establish another specialized industrial park at Jiangyin, Jiangsu Province. In addition to expanding our manufacturing capacity, we also plan to further improve our manufacturing efficiency and processes by reducing our manufacturing cycle times and upgrading existing technologies.

### ***Manufacturing Process***

The diagram below illustrates the major manufacturing process of our principal products:

Generally, our manufacturing process can be broadly categorized into the following steps:

- § *Procurement of raw materials, parts and components.* Principal raw materials, parts and components include steel sheets, round steel, steel pipes, electrical parts, hydraulic cylinders and valves and chassis. Some of the raw materials, parts and components do not need to be processed. They can be assembled into semi-finished products upon completion of quality inspection.
- § *Processing of raw materials, parts and components.* Raw materials, parts and components are processed according to the necessary technical specifications to form the specified components. Such treatment process includes cutting, drilling, gas cutting, welding, bending, abrasive blasting, polishing, pre-coating, machining and heat treatment. While we purchase some components processed by third parties, the processing of raw materials, parts and components is typically either carried out by us or is outsourced to external third parties who conduct the processing based on our designs and technical specifications. We typically outsource procedures that do not involve our proprietary technologies to third parties, including surface treatment, painting and zinc plating. We perform strict quality control measures to inspect the raw materials, parts and components processed by third parties.
- § *Assembly of parts and components into semi-finished products.* Raw materials, parts and components are further processed to form semi-finished parts ready for final assembly. These materials will undergo processes including welding and drilling.
- § *Assembly and integration of semi-finished products.* All semi-finished parts and components, such as electric motors, electric controls, hydraulic cylinders and valves and chassis, are assembled and integrated to form the finished products.
- § *Coating.* Finished products are sent to the coating factory.
- § *Commissioning.* Finished products are sent for commissioning, further adjustments and fine tuning before being dispatched to the manufacturing sites for evaluative testing and quality inspection. For additional information as to the testing and quality inspection of our products, please see “—Quality Control.”
- § *Warehousing.* The painted final products are sent to our warehouses for storage and distribution to our customers.

To avoid duplication of processing facilities in our different specialized industrial parks and factories,

Every stage of our manufacturing process is subject to quality control procedures and adheres to our strict quality control standards. See “—Quality Control” for additional information.

In order to utilize our manufacturing facilities more effectively and enhance our manufacturing efficiencies, we are continuously improving our manufacturing processes. We have hired experts in relevant areas to implement lean manufacturing and zero-defect manufacturing measures. Our headquarters develops general directional strategies to improve our manufacturing efficiencies, which are then adjusted and implemented by each of our business divisions, with the approval of our headquarters, to best suit their manufacturing activities. We believe that this approach enables our business divisions to tailor the implementation of the strategies and improve their manufacturing processes, and thus, allocate resources more efficiently and help address the practical business needs.

### *Manufacturing System*

We have developed and implemented an advanced manufacturing system based on the master production schedule, or MPS, model. At the end of the third quarter of each year, our senior management first sets the overall business plan as well as a target for our domestic and international sales plan for the next year based on the prevailing macro economic outlook, industry forecast and our strategic targets. The manufacturing division would then set an MPS to implement the overall business plan and to achieve the domestic and international sales targets. The MPS sets out the quantity of each model to be completed in a given month. At the end of each month, our manufacturing division sets the detailed manufacturing plan that covers each phase of the manufacturing process for the following month in order to implement the MPS. In order to minimize inventory levels, our manufacturing department also adjusts the MPS based on the actual orders we receive.

We utilize automated and computerized systems in our manufacturing lines for many stages of our manufacturing processes in most of our manufacturing facilities. As a result, certain specific

and up to the date of this offering memorandum, we have not experienced any product recall that adversely impacted our reputation, business operations or financial condition. Our quality control

are manufactured specifically for an individual product type, including steel, chassis and hydraulic pumps, we enter into strategic framework agreements to ensure a sufficient supply. Our strategic cooperation framework agreements express the parties' intention to explore future cooperative opportunities and normally specify favorable pricing terms, supply priority, quantity, and quality of raw materials, parts and components to be provided, and post-sales service assurance. Our strategic cooperation framework agreements also provide for minimum purchase volumes. Our strategic cooperation framework agreements typically have a term of one to three years. We make our raw materials, parts and components procurement plan based on the MPS. Depending on the type and lead time of raw materials, parts and components, purchase orders are issued on a weekly or monthly basis.

## *Sales and Distribution*

We have established an extensive distribution network in China. As of September 30, 2012, the distribution network consisted of 935 outlets, 1,007 service centers and 528 components depots owned and operated by us, as well as 134 outlets, 227 service centers and 148 components depots owned and operated by third-party dealers, covering more than 300 cities and all provinces and autonomous regions in China. As of September 30, 2012, we employed over 7,300 marketing, sales and after-sales services personnel in China. In addition, we sell our products to over 120 different countries and have also established an extensive overseas distribution network which, as of September 30, 2012, consisted of 52 outlets, 73 service centers and 23 parts and components depots owned and operated by us, as well as 120 outlets, 140 service centers and 60 parts and components depots owned and operated by our 62 third-party dealers. Our dealers generally have experience in the sales of construction machinery or other machinery. As part of our strategy to enhance our sales and distribution network, beginning in 2011, we make investments in certain of our dealers in China from time to time.

We provide personalized and tailored purchasing experiences for our customers by offering consultations to design comprehensive solutions in accordance with each customer's specific needs, industry and business operations. For example, our engineers will accompany our customers to their construction sites to understand work requirements and recommend the most suitable products. We also provide technical advisory services to our customers and assist them in designing construction plans based on available equipment. For special projects, we work with our customers to design and manufacture tailored products to address the customers' unique needs. Some of our products are sold to customers who, as a result of our reputation or customer referrals, approach us directly. However, we also actively source business through open or invited tenders where competitive bidding processes are arranged by potential customers.

We select our dealers in China based on their reputation, market coverage, sales experience and ability to foster relationships with local customers, financial strength and existing or potential size of their distribution force. Our dealers include specialized construction machinery retailers, car dealers and electrical engineers, including special equipment service providers. We typically require a deposit when we engage a dealer. We have two types of arrangements with our dealers. Under the first type, our dealers in China purchase our products from us and subsequently sell our products within a designated region to end-users. Under the second type, we sell our products through dealers to particular customers or projects, and the sales contracts for our products are between the customer and us. Our dealers under the second type of arrangement are compensated by commissions paid by us. In 2009, 2010, 2011 and the nine months ended September 30, 2012, a majority of our sales in connection with dealership arrangements are made under the first type of arrangement.

For the first type of arrangement with our dealers, we typically enter into written distribution agreements for a one-year term with our dealers in China that are generally renewed annually. The second type of arrangement with our dealers is typically customer and/or project based and the contract terms vary from dealer to dealer. These distribution agreements set forth guidelines for the sale and distribution of our products, including restrictions on the territories in which our products may be sold to end-users by such dealers. Our distribution agreements also allow our dealers to sell our products to overseas end-users. Dealers who sell our products to overseas end users are typically subject to the same terms and conditions under the first type of arrangement, and have similar rights and obligations

to the other dealers under the first type of arrangement. Under the first type of arrangement, we typically enter into non-exclusive agreements under which we are not bound to only sell to such dealers within a defined territory. Our distribution agreements typically have certain periodic sales targets to facilitate our evaluation of the performance of our dealers. Failure of our dealers to achieve the sales targets would not result in any penalty, but may result in non-renewal of the distribution agreement. In addition, if the dealers sell competing products from other companies, we also reserve the right to terminate the distribution agreements. Under the second type of arrangement, we typically enter into non-exclusive agreements with our dealers.

We utilize different combinations of direct sales outlets and dealers for different types of products, customers' demand and geographic areas to maximize our market penetration. As part of our efforts to integrate resources across different operating segments, since 2008, we have established various all-products sales and service centers in major cities across the key markets where there is strong demand for more than one line of our products and our important customers are located, allowing us to fully leverage our customer relationships and information and to cross-sell our products.

Our products are typically sold internationally through dealers supported by certain of our own distribution outlets staffed with our own personnel. Our international distribution network is comprised of 62 third-party dealers as of September 30, 2012. Our international third-party dealers typically purchase our products from us and subsequently sell our products within a designated region to end-users. The contractual arrangements with our international third-party dealers are similar to the first type of contractual arrangement with our third-party dealers in China in this respect. Certain of our international dealers also engage sub-dealers to further broaden the market reach of our products. We typically enter into written exclusive distribution agreements with our international dealers for either one- or two-year terms that can be renewed upon expiration of the agreements. International distribution agreements contain similar terms as our domestic distribution agreements, but many of the

tires, batteries and friction plates in our mobile cranes are subject to warranty terms of 30 days, 45 days and three months, respectively. In addition, our product warranty does not cover normal wear and tear during the products' use. Our product warranty typically requires us to provide after-sales services covering parts and labor for non-maintenance repairs, provided operator abuse and improper use or negligence did not necessitate the repair. Certain parts and components of our products, however, are not covered by us but are covered by the warranties of the manufacturers of such parts and components, such as the branded chassis used in our products. In accordance with the relevant return procedures, our customers can return defective components of our products to us during the warranty period. Following the expiration of the warranty period, we may provide repair and maintenance services and supply parts and components for a fee based on the services required. Product warranty expenses incurred in 2009, 2010, 2011 and the nine months ended September 30, 2011 and 2012 were RMB87 million, RMB135 million, RMB154 million (US\$25 million), RMB100 million and RMB120 million (US\$19 million), respectively.

We provide a comprehensive suite of after-sales services to our customers, which includes many value-added services aimed at lowering costs to our customers and increasing their productivity and operating efficiency. When our products arrive at our customers' locations, our technical personnel are present on-site to provide any required installation and assembly services. Furthermore, to ensure that our customers understand the operation and functions of our products, we provide on-site technical and product training. We also perform preventive maintenance and diagnostics for our customers, instead of waiting for our customers to request maintenance services. Other value-added after-sales services include the procurement of product insurance and other necessary certifications and providing ongoing relevant industry advice and analysis. Furthermore, we are one of the few construction machinery manufacturers' in China to offer remanufacturing services as a value-added service to our customers, including technological upgrades and extending the life of their products at the request of customer.

As part of our commitment to provide quality after-sales services, we implement a "24 Hours On-call" policy under which we aim to respond to customers within 24 hours. We also provide on-site support to our customers within two hours for urban areas covered by our service centers.

After-sales services overseas are currently provided either through over 140 service centers and 60 parts and components depots of our international dealers or through 73 of our own service centers and 23 parts and components depots located across Italy, Russia, the United Arab Emirates, Belgium, Vietnam and 30 other countries.

In order to ensure that our brand is associated with high quality and both reliable and responsive service levels, we constantly provide training to our own and our dealers' after-sales services personnel. We expect our dealers to provide the same, if not higher, levels of service than our own personnel, with such capability an important criterion in our selection of dealers. We also continuously catalog and archive our customers' product usage history which assists us in improving the quality of our services and enhancing our knowledge as to such customers' preferences, needs, constraints and strategies and the field performance of our products.

### ***Pricing Strategy***

We formulate and adjust the prices for most of our products based on such product's life cycle and in a

we adopt a pricing strategy focused on maximizing our profitability and margins. We also take into account factors such as product capabilities, degree of competition, market demand and changes and improvements in technical innovations in pricing our products. The sales prices of our products are formulated at the sales center level. The prices of our products are not subject to official price guidelines under PRC laws and regulations. The sales prices of our products are generally the same within each designated region in China but may be affected by variation in transportation costs. However, the sales prices of our products outside of China are generally higher than the sales prices for the same products in China. For most of our machinery, we set a suggested sale price, while giving

---

Note:

- (1) The interest income from finance lease service is not included in the sales under finance lease arrangement in the above table as such income is not directly derived from product sales under the finance lease payment option. In 2009, 2010, 2011 and the nine months ended September 30, 2011 and 2012, our interest income under finance lease amounted to RMB397 million, RMB1,043 million, RMB1,583 million (US\$252 million), RMB1,116 million and RMB1,219 million (US\$194 million), respectively.
- § Under the full payment option, credit terms granted to our customers normally range from one to three months from the date of billing, and an upfront payment ranging from 10% to 30% of the product price is required based on the different terms agreed with the customers.
- § Under the installment payment option, our customers are typically required to make an upfront payment ranging from 10% to 40% of the product price and settle the remaining balance on a monthly equal installment basis within 24 months. We allow certain customers with appropriate credit standing to make payments in installments over a period of up to 36 months.
- § Under the financial guarantee arrangement, our customers are required to make an upfront payment ranging from 20% to 30% of the product price and arrange bank loans for the remaining balance to finance the purchase of machinery, and we will provide financial guarantees for such customers' bank loans. The terms of these guarantees coincide with the tenure of bank loans that generally range from two to four years.
- § Under the finance lease arrangement, the length of the lease is generally two to four years, although for certain products that have a longer useful life, such as tower cranes, crawler cranes and large-capacity truck cranes, we may extend the length of the lease to five years. Our finance lease services cover all our product lines, including concrete machinery, crane machinery, environmental and sanitation machinery, road construction and pile foundation machinery, earth working machinery, material handling machinery and systems and other types of machinery products. Generally, our products have an estimated average useful life of ten years. However, based on circumstances including working conditions, work load, usage and maintenance, the actual useful life of our products could vary significantly among our end-users. The length of the lease is typically much shorter than the useful life of the leased equipment. An upfront payment ranging from 5% to 20% of product price is required. Also, we require a security deposit equal to 1% to 10% of the product price.

customers choosing our installment payment option, financial guarantee arrangement and financial lease arrangement. These evaluations focus on each customer's background and financial strengths,

receivables upon repossession of the equipment under the relevant finance leases by such bank. We dispose of or recycle such repossessed used equipment after refurbishing or remanufacturing, or in certain cases, sell such used equipment as is.

To manage the risks associated with finance leases, we established a risk control committee, which is responsible for risk evaluation for each credit investigation report submitted to them, the establishment of credit risk management policies, the supervision on the implementation of such policies, and risk management for finance leases, including determination of the key terms of the lease contracts such as interest rate, lease period and amount of security deposit. The risk control committee members are also responsible for approval of each leasing transaction within their respective authority. In May 2012, in view of the general economic condition in China, we strengthened our risk management and collection efforts. We established a risk management committee at our headquarters to replace the risk control committee for our finance lease services. The newly-established risk management committee is chaired by Dr. Sun Changjun, and comprises a number of our senior management, including Dr. Su Yongzhuan, Ms. Hong Xiaoming and Mr. Guo Xuehong. We have also appointed an internal control director to oversee and supervise our risk management practices. Our credit risk management procedures with respect to finance lease services include pre-lease investigation, lease approval, lease payment collection and management, as well as repossession and subsequent sale of machinery and forfeiture of related customer deposits in case of customer default. Moreover, we established a collection center at our headquarters and have implemented various measures, including incentive schemes for our personnel responsible for collecting receivables.

### ***Marketing***

We place great emphasis on the promotion of end-users' awareness of our brands and products. Our headquarters sets general strategies to promote our brands and approve marketing and promotional activities that are formulated and carried out by our respective business divisions, which vary according to our customer targets for the specific product type. Our marketing and promotional activities include offering extended warranties and participating in or organizing seminars, tradeshow

We have also carried out research and development projects in collaboration with several domestic institutions. Currently, we maintain cooperative relationships in connection with various research and development projects, including:

- § Zhejiang University;
- § Shanghai Jiao Tong University;
- § Tongji University;
- § Beijing University of Aeronautics and Astronautics;
- § Hunan University;
- § Dalian University of Technology; and
- § Dalian Maritime University.

Our cooperation with these domestic institutions relates to the research and development of technologies that are crucial to our product development and enhancement. For specific research and development projects, we typically enter into cooperation agreements that typically require us to pay a fixed amount of service fees to the domestic institutions, and we have the exclusive rights to use the proprietary technology or patent resulting from such research and development projects. We also outsource certain processes in connection with our research and development efforts, including product testing, designing of data analysis systems and software development, to these domestic institutions. The results of the research and development projects are either solely owned by us or co-owned by the domestic institution and us. In certain limited circumstances, we also enter into cooperation agreements which require us to share a specified percentage of our profit from the sales of our products incorporating research and development results (certain) product completion)-291.ating our 736(o)1] TJ-2.4-3'

As a result of our leading market position and our active involvement in the establishment of national and industry standards, we are also an important member of the CCMA, the official construction machinery industrial organization in China under the SASAC which has over 1,500 members in total. However, given that all the major industry players are members of CCMA, we do not believe we are able to influence the data collection and publication process of CCMA. We believe our active participation in establishing industry standards and our nationally accredited research and development laboratories allow us to focus our research and development efforts on addressing prevailing market trends and develop products with industry-leading technological capabilities.

### ***Product Research and Development***

We focus our product research and development on improving product performance, features and controls to satisfy evolving and differentiated customer requirements and fine tune our product models to maximize product performance in varying working environments and conditions. We have developed and launched over 800 different products since the founding of our Group, which included a number of new products and product upgrades that have generated significant turnover, been commercially successful, and both realized a technology breakthrough in China and opened new opportunities, such as:

§ truck-mounted concrete pumps with six-joint jibs, which significantly enhanced the maximal concrete placing range;

§

§ K-Tronic intelligent electrical control systems;

§ boom fatigue test beds;

§ pumping unit test beds; and

§ finite element calculation.

While most of our products are not tailored to meet specific needs of individual customers, we may, from time to time, enter into arrangements with our customers to design and manufacture products based on their specific needs. The development of such products, while based on requests from our customers, are actually designed by us, and the intellectual property rights arising from the development of such products are usually owned by us and not by our customers. As part of our arrangements with our customers, our customers generally will arrange for their own technicians and engineers to participate in an appraisal of our new product designs, provide us with industrial testing fields for the testing of our new products, and after using our products, provide us with periodic updates and information so as to assist us in the development of new technology to upgrade the performance of the product. In return, we provide our customers with certain benefits or discounts for them to purchase such products.

T T T T

We are committed to the development and protection of our intellectual property portfolio. We rely on a combination of patents, trademarks, copyrights and trade secret laws, employee and third-party non-disclosure/confidentiality and non-competition agreements to protect our intellectual property. We own and have applied for patents to protect the technologies, inventions and improvements that we believe are significant to our business. As of September 30, 2012, we held 1,530 patents in China, including 72 invention patents, 1,268 utility patents and 190 design patents. In addition, as of September 30, 2012, we had 27 patents held by CIFA in Italy. We also had 1,445 pending patent applications in China as of September 30, 2012. We anticipate we will apply for additional patents in the future as we develop new products, technology and designs.

We hold a number of registered trade names, brand names and registered trademarks. As of September 30, 2012, we maintained 598 trademark registrations in China, including eight trademark registrations for our CIFA brand in China, and 407 trademark registrations overseas. Our subsidiary CIFA maintained 24 trademarks registrations in Italy. In addition, as of September 30, 2012, we had 47 trademark applications in China, 122 trademark applications overseas, and we are also applying for trademark registrations in member countries of the Madrid Agreement, the European Union and the African Regional Intellectual Property Organization. Two of our trademarks were recognized as “Well-Known Trademarks” nationwide. Our trademark, the Chinese characters for Zoomlion and our trademark “Zoomlion”, were recognized as “Well-Known Trademarks” in China.

We have also obtained 57 copyrights for our software in China used to control the various electrical components in our products as of September 30, 2012.

With respect to proprietary know-how that is not patentable or for which patents are difficult to enforce, we rely on trade secret protection and non-disclosure/confidentiality and non-competition agreements in order to safeguard our interests. All of our personnel who have access to sensitive and confidential information have entered into non-disclosure/ confidentiality and non-competition agreements with us. We also take other precautions, such as internal document controls and network assurance procedures, including the use of a separate dedicated server for technical data.

## T T

The industry in which we operate is highly competitive. We face direct competition both in China and internationally across all product lines and price ranges. In China, our competitors include domestic Chinese companies, such as XCMG Group, Sany Group and other domestic manufacturers that either offer a range of construction machinery and environmental and sanitation machinery or some specific types of competing products, and occasionally, certain multinational companies. In the international market, our major competitors include multinational companies such as Caterpillar Inc, Komatsu Machinery Corporation, Liebherr Group, Terex Corporation and Manitowoc Company Inc, regional manufacturers and certain domestic Chinese companies. Moreover, the industry is becoming increasingly competitive as new foreign entrants are currently seeking to enter the PRC market while more domestic Chinese manufacturers are enhancing their international penetration and competitiveness.

As of September 30, 2012, we employed a total of 32,624 employees which are classified as follows:

	Number of Employees	Percentage
Technology, research and development .....	4,203	12.9%
Production .....	13,364	41.0%
Sales and marketing .....	7,855	24.1%
Management and administration .....	6,448	19.7%
Finance .....	754	2.3%
Total .....	<u>32,624</u>	<u>100.0%</u>

In 2009, 2010, 2011 and the nine months ended September 30, 2012, the staff costs we incurred were approximately RMB1,383 million, RMB2,249 million and RMB3,076 million (US\$489 million) and RMB2,360 million (US\$376 million), respectively.

We provide management personnel and employees with on-the-job education, training and other opportunities to improve their skills and knowledge. We sign individual employment agreements with our employees, covering, among other things, salaries, benefits, training, workplace safety and hygiene, confidentiality obligations relating to trade secrets and grounds for termination. The remuneration package of our employees includes salary, bonuses and allowances. Our employees also receive welfare benefits including medical insurance, housing subsidies, pension insurance,

unemployment insurance, maternity insurance and other miscellaneous benefits. We made contribution to pension plans, which amounted to approximately RMB104 million, RMB122 million, RMB178 million (US\$28 million) and RMB200 million (US\$32 million) in 2009, 2010, 2011 and the nine months ended September 30, 2012, respectively.

T T TT

We are subject to extensive national and local environmental laws and regulations where we operate concerning, among other things, emissions to the air, discharges to land, surface water and subsurface water, the generation, handling, storage, transportation, treatment and disposal of waste and other materials, and the remediation of environmental pollution relating to our properties and operations. Our products will need to comply with the applicable safety, exhaust and performance standards adopted by the respective jurisdictions into which we sell, which may differ depending on their respective characteristics. See “Regulatory Overview” for additional information. However, for certain parts and components used in our products, such as branded chassis, it is the manufacturers of such parts and components who are responsible for ensuring that their parts and components are in compliance with the safety, exhaust and performance standards set forth by the relevant jurisdictions in which we sell our products. In 2009, 2010, 2011 and the nine months ended September 30, 2012, our cost of compliance with environmental protection rules and regulations was approximately RMB79 million, RMB10 million, RMB20 million (US\$3 million) and RMB15 million (US\$2 million), respectively.

The PRC national and local environmental laws and regulations impose fees for the discharge of waste substances above prescribed levels, require the payment of fines for serious violations and provide that the PRC national and local governments may at their own discretion close or suspend the operation of any facility that fails to comply with orders requiring it to cease or remedy operations causing environmental damage. The Italian environmental laws and regulations impose fees for the discharge of waste substances above prescribed levels, require the payment of administrative fines or impose criminal sanctions for serious violations and provide that the governmental or local authorities may require specific actions to be taken to remedy or discontinue any course of action that is causing environmental damage. We have installed various types of anti-pollution equipment in all our facilities to reduce, treat, and where feasible, recycle the wastes generated in our manufacturing process. We have also built appropriate facilities to filter and treat waste water and recycle the water back into our manufacturing process, as well as treat gaseous waste to reduce contaminant levels to below the applicable environmental protection standard before emission. As advised by our PRC legal advisors, Fangda Partners, and our Italian legal advisors, we have obtained all material environmental permits to conduct our manufacturing activities and we complied with the applicable environmental laws and regulations in the PRC and Italy in 2009, 2010, 2011 and the nine months ended September 30, 2012. We received ISO 14001 certification, the internationally recognized standards for the design and implementation of effective environmental management systems, covering the manufacturing process for all of our products. During 2009, 2010, 2011 and the nine months ended September 30, 2012, we did not received any notifications or warnings, nor were we subject to any fines or penalties in relation to any breach of any applicable environmental laws or regulations which had materially and adversely affected our financial condition or business operations.

We are subject to the PRC laws and regulations regarding labor, safety and work-related incidents. Our subsidiary CIFA in Italy is subject to Italian health and safety laws and regulations, which impose a number of strict safety standards and regulations that need to be followed within any premises or facilities or areas where work is conducted, so as to prevent accidents to employees and workers. Italian health and safety laws and regulations provide for administrative fines and even criminal sanctions against an employer who does not comply with the health and safety laws. We provide safety protection to our employees working in our manufacturing facilities, which includes providing them with adequate safety equipment and ensuring that our manufacturing facilities have adequate precautionary measures. In addition, we provide safety-related education to our employees to increase awareness as to safety in the workplace. Relevant warning signs, such as those against smoke and heat emissions are always used at required locations. During 2009, 2010, 2011 and the nine months ended September 30, 2012, we had complied with the relevant PRC and Italian workplace safety regulatory requirements in all material respects and have not had any incidents or complaints which had materially and adversely affected our financial condition or business operations.

We maintain insurance policies on certain of our vehicles that cover losses arising from fire, earthquake, flood and a wide range of other natural disasters. We also maintain insurance policies in respect of transit risks of our products and personal injury insurance for our employees. Our subsidiary CIFA maintained insurance for inventories and production facilities, as well as product liability insurance. We do not maintain insurance on other properties and fixed assets of our other subsidiaries, including our production facilities, equipment and inventory. We also do not maintain product liability insurance, business interruption insurance, key-man life insurance or insurance covering potential liability relating to the release of hazardous materials, which we believe is in line with industry practices in China. In 2009, 2010 and 2011, we have not experienced any product liability claims. We plan to increase our insurance coverage in the near future to cover losses arising from potential liability of our Company and secure our assets. As advised by our PRC legal advisors, Fangda Partners, our insurance policies are in compliance with relevant laws and regulations in the PRC.

▲

▲

On December 29, 2008, we entered into an Equity Transfer Agreement with Skyworth Mobile Communication (Shenzhen) Limited, or Skyworth Mobile, a mobile phone producer and an independent third party of the Company. Pursuant to the Equity Transfer Agreement, we were required to transfer 65% of the equity interests in Changsha New High-tech Industrial Development Zone Zhongke Beidou Hangdian Technology Co., Ltd., or Zoomlion Beidou, which was all of our equity interest in Zoomlion Beidou, to Skyworth Mobile for a purchase price of RMB20.15 million. We have transferred the 65% equity interests to Skyworth Mobile and such equity interests were registered in the name of Skyworth Mobile on December 30, 2008 with relevant registration authorities in China. After the sale of all of our equity interest in Zoomlion Beidou, we ceased to be a shareholder of Zoomlion Beidou and did not retain any control in this entity. Hence, we have ceased to consolidate this entity since then and did not enter into any shareholders agreements with Skyworth Mobile. The Equity Transfer Agreement provides that RMB10.0 million of the purchase price is due within 60 days of the effective date of the agreement, and RMB6.0 million is payable within 45 days of the completion

of the registration with the relevant authority in China. The rest of the purchase price is payable within 45 days after the due date of the RMB6.0 million. However, Skyworth Mobile failed to pay us the purchase price when due and we filed a claim against Skyworth Mobile at a court in Changsha. The court entered into a judgment in our favor on July 24, 2009 ordering Skyworth Mobile to pay us RMB21,070,598.44 for the purchase price, interest accrued thereon and reasonable expenses. Skyworth Mobile appealed to a higher court which dismissed the appeal and upheld the original judgment. On January 15, 2010, we applied to the relevant court for the enforcement of this judgment. As of September 30, 2012, we were still in the process of enforcing the judgment. Having considered the court's favorable judgment, as well as the assets of Skyworth Mobile frozen by the court to secure the settlement of the outstanding receivable balance, we have made a RMB10 million impairment provision against the RMB20.15 million receivable balance, which we believe is adequate. Furthermore, a number of investors have expressed interest in purchasing the equity interest in Zoomlion Beidou from Skyworth Mobile, who is in the process of negotiating a transfer agreement with these investors. We expect the transfer price of the equity interest to be used to settle the receivable balance.

Other than as disclosed in this offering memorandum, there are no other litigation or arbitration proceedings pending or threatened against us or any of our directors which could have a material adverse effect on our financial condition or results of operations.

During the nine-month period ended September 30, 2012, trade receivables of RMB2,699 million (nine-month period ended September 30, 2011: nil) were factored to banks and other financial institutions without recourse, and were therefore derecognized.

*(a) Ageing analysis of trade receivables*

Ageing analysis of trade receivables based on the date of billing (net of provision for impairment) as at the balance sheet date is as follows:

	<u>30,</u>	<u>31,</u>
	<u>2012</u>	<u>2011</u>
Within 1 month . . . . .	5,617	4,547
Over 1 month but less than 3 months . . . . .	5,215	2,362
Over 3 months but less than 1 year . . . . .	6,821	3,401
Over 1 year but less than 2 years . . . . .	1,443	932
Over 2 years but less than 3 years		

	<u>September 30,</u>	<u>September 30,</u>
	<u>2012</u>	<u>2011</u>
Gross investment .....	24,387	22,135
Unearned finance income .....	<u>(2,367)</u>	<u>(2,126)</u>
	22,020	20,009
Less: provision for impairment (Note(c)) .....	<u>(229)</u>	<u>(140)</u>
	21,791	19,869
Less: receivables under finance lease due after one year .....	<u>(13,806)</u>	<u>(12,780)</u>
Receivables under finance lease due within one year .....	<u><u>7,985</u></u>	<u><u>7,089</u></u>

As September 30, 2010, receivables under finance lease due after one year were \$13,806, and receivables under finance lease due within one year were \$7,985. As of September 30, 2011, receivables under finance lease due after one year were \$12,780, and receivables under finance lease due within one year were \$7,089. Receivables under finance lease are recorded at the net present value of the lease payments to be received, discounted at the effective interest rate. Receivables under finance lease are classified as non-current assets if the lease term exceeds 12 months. Receivables under finance lease are classified as current assets if the lease term is 12 months or less. Receivables under finance lease are classified as non-current assets if the lease term exceeds 12 months. Receivables under finance lease are classified as current assets if the lease term is 12 months or less.

*(a) Ageing analysis of receivables under finance lease*

The minimum lease payments receivable at the balance sheet date is as follows:

	<u>30,</u> <u>2012</u>	<u>31,</u> <u>2011</u>
<i>Present value of the minimum lease payments</i>		
Within 1 year .....	8,114	7,139
Over 1 year but less than 2 years .....	6,425	6,300
Over 2 years but less than 3 years .....	4,441	4,178
Over 3 years .....	<u>3,040</u>	<u>2,392</u>
	<u>22,020</u>	<u>20,009</u>
<i>Unearned finance income</i>		
Within 1 year .....	1,209	1,024
Over 1 year but less than 2 years .....	705	671
Over 2 years but less than 3 years .....	288	318
Over 3 years .....	<u>165</u>	<u>113</u>
	<u>2,367</u>	<u>2,126</u>
<i>Gross investment</i>		
Within 1 year .....	9,323	8,163
Over 1 year but less than 2 years .....	7,130	6,971
Over 2 years but less than 3 years .....	4,729	4,496
Over 3 years .....	<u>3,205</u>	<u>2,505</u>
	<u>24,387</u>	<u>22,135</u>

Generally, sales under finance lease arrangement has lease periods ranging from two to five years, customers are required to make an upfront payment ranging from 5% to 20% of the product price and pay a security deposit ranging from 1% to 10% of the product price.

*(a) Short-term loans and borrowings:*

	<i>Note</i>	<u>30,</u> <u>2012</u>	<u>31,</u> <u>2011</u>
Secured short-term bank loans

		<u>9,263</u>	<u>6,049</u>

Notes:

(i) The RMB denominated secured short-term bank loans as at September 30, 2012 were secured by fixed assets and receivables with an aggregate carrying value of RMB26 million (December 31, 2011: RMB339 million).

(ii) As at September 30, 2012, USD denominated unsecured short-term bank loans of RMB507 million (December 31, 2011:

*(b) Long-term loans and borrowings:*

<u>Note</u>	<u>30,</u>	<u>31,</u>
	<u>2012</u>	<u>2011</u>
Secured long-term bank loans		
— RMB denominated		

The remaining USD denominated unsecured long-term bank loans of RMB371 million (December 31, 2011: RMB221 million) bore interest at 3.5% to 4.2% per annum and had maturities of 8 months to 23 months from the balance sheet date.

- (v) In April 2008, the Company issued bonds with principal amount of RMB1,100 million to public and institutional investors. The bonds bear interest at a fixed rate of 6.5% per annum and mature in April 2016. The holders of the bonds have an option to redeem, in whole or in part, of the principal amount of the bond on the fifth anniversary date of the bond issuance date at par value.
- (vi) In April 2012, Zoomlion H.K. SPV Co., Limited, a wholly-owned subsidiary of the Company, issued 5-year senior notes with principal amount of USD400 million (RMB equivalent 2,521 million). The senior notes are guaranteed by the Company, bear interest at a fixed rate of 6.875% per annum and will mature in April 2017. Interest on the notes will be payable semi-annually in arrears in April and October of each year.
- (c) Except as disclosed in Notes 12(a)(ii) and 12(b)(iv) above, none of the Group's loans and borrowings contains any financial covenants.

16

**(a) Financial guarantee issued**

Certain customers of the Group from time to time may finance their purchase of the Group's machinery products through bank loans, and the Group provides guarantees to the banks for the amount drawn by customers. Under the guarantee arrangement, in the event of customer default, the Group is required to repossess the machinery collateralizing the bank loans, and is entitled to sell the machinery and retain any net proceeds in excess of the guarantee payments made to the banks. As at September 30, 2012, the Group's maximum exposure to such guarantees was RMB11,709 million (December 31, 2011: RMB9,092 million). The terms of these guarantees coincide with the tenure of bank loans which generally range from 2 to 4 years. The Group, when called upon by the banks to fulfill its guarantee obligations, has historically been able to sell the repossessed machinery forthn.80Td67luk010436.D0T-possessedh  
cptembed11(d)1.-5025(5-3.1850-1.cT\* [(Ce464es)-546der6(t)465he)-290(G)3(roup465hy)-294(fi465hle6(pur465hc)-2r

company. As at September 30, 2012, the Group's maximum exposure to such guarantees was RMB1,082 million (December 31, 2011: RMB1,634 million). The terms of these guarantees coincide with the tenure of the lease contracts which generally range from 2 to 4 years. For the nine-month
